Wong's Essentials of Pediatric Nursing: Second South Asian Edition

This comprehensive book presents an evidence-based approach to treating asthma in adults aged 65 and older, a vulnerable subset of patients who are more likely to experience higher morbidity and mortality rates, and often enduring higher financial burdens related to treatment. Treatment of Asthma in Older Adults: A Comprehensive, Evidence-Based Guide is a unique resource, providing an up-

to-date review of medication strategies, how asthma phenotypes and treatment decisions interact, and how controlling asthma triggers impacts long-term asthma outcomes in older patients. Additionally, the book incorporates recent advances in alternative therapies that improve the patient's quality of life. Opening discussions address the unique challenges of the differential diagnosis of asthma in older adults, as well as an examination of the significant medical comorbidities that co-exist with asthma. Subsequent chapters provide strategies to optimizing asthma management in this specific population, including information on case management that will assist allied health providers. Finally, the book closes with an analysis of several novel targets for therapy to treat severe asthma including biologics, macrolides and bronchial thermoplasty. Written by experts in the field, *Treatment of Asthma in Older Adults: A Comprehensive, Evidence-Based Guide* is an indispensable resource for allergists, pulmonologists, family physicians, physician assistants, nurse practitioners and all other allied clinicians.

This issue of *Chest Medicine Clinics* focuses on *Interventional Pulmonology*, with topics including: Flexible bronchoscopy; Radiology for mediastinal lymph node station in lung cancer diagnosis and staging; Lung cancer screening; Early lung cancer detection; Palliative care and interventional pulmonology; Anesthesia for flexible and rigid bronchoscopy; Mediastinal and pulmonary pathology: Specimen collection and processing; Bronchial Thermoplasty: A nonpharmacological therapy for severe asthma; Bronchoscopic lung volume reduction; Malignant pleural effusion: From diagnostics to therapeutics; Intrapleural therapeutics; Percutaneous dilational tracheostomy; Tracheobronchial stenosis and Tracheobroncho malacia: diagnostic and therapeutic dilemmas; Pediatric interventional

pulmonology; The Business of Bronchoscopy: How to set up an Interventional Pulmonology Program; Bronchoscopic therapies for peripheral lung malignancies; and Bronchial Thermoplasty: A nonpharmacological therapy for severe asthma.

Including comprehensive coverage of health disparities commonly encountered in pediatric and adult pulmonary, critical care, and sleep medicine, *Achieving Respiratory Health Equality in the United States* provides a definitive reference on this prominent issue. Expert authors explore questions such as: \* What is the evidence that respiratory health disparities exist? \* What do we know about the causes of the disparities? \* What are the clinical implications? \* What can be done to address the particular disparities and thus achieve health equality? Recognizing the magnitude of this problem, the American Thoracic Society (ATS) Executive Committee created a Health Equality Sub-Committee, with an initial mandate of defining respiratory health disparities and respiratory health equality in the United States. This book will follow the format of a workshop on respiratory health equality held before the 2015 ATS International Meeting and led by editor Juan Carlos Celedón. Written by the workshop presenters, this book focuses closely on major risk factors for health, specific respiratory diseases for which health disparities are known to occur, and potential approaches to eliminate such disparities. *Achieving Respiratory Health Equality in the United States* is a timely resource for researchers, clinicians, and public health practitioners in respiratory medicine.

This exceptional text builds your knowledge of pharmacology by first providing an overview of pharmacologic principles and then teaching you how to apply those principles to clinical practice. Focusing on applying pharmacologic scientific knowledge to clinical practice, it explains diagnostic and

Advances in Pediatrics reviews the most current practices in pediatrics. A distinguished editorial board, headed by Dr. Michael Kappy, identifies key areas of major progress and controversy and invites expert pediatricians to contribute original articles devoted to these topics. These insightful overviews bring concepts to a clinical level and explore their everyday impact on patient care. Topics such as fetal diagnosis and surgical intervention, updates in pharmacology, and fatty liver disease are represented, highlighting the most current and relevant information in the field.

This wide-ranging study reviews the state of public health worldwide and presents informed recommendations for real-world solutions. Identifying the most urgent challenges in the field, from better understanding the causes of acute diseases and chronic conditions to reducing health inequities, it reports on cost-effective, science-based, ethically sound

interventions. Chapters demonstrate bedrock skills essential to developing best practices, including flexible thinking for entrenched problems, conducting health impact assessments, and working with decision-makers. From these current findings come long-term practice and policy goals for preventing disease, promoting health, and improving quality of life, both locally and globally. A sampling of the topics covered: · Health trends of communicable diseases. · Epidemiology of cancer and principles of prevention. · Respiratory diseases and health disorders related to indoor and outdoor air pollution. · Public health gerontology and active aging. · Migrant and ethnic minority health. · Public health genomics. A Systematic Review of Key Issues in Public Health offers graduate students in the discipline a firm grasp on the field as it presently stands, and a clear set of directions for its potential future.

The diagnosis and treatment of disease is a primary concern for health professionals and all of society. With the growing use of alternative medicine, patients can receive a wider scope of potential treatment options.

Complementary and Alternative Medicine:

Breakthroughs in Research and Practice is a critical reference source for the latest research findings on the application of complementary and alternative medicine in the prevention and treatment of numerous diseases.

Highlighting a range of pertinent topics such as herbal remedies, antioxidants, and functional foods, this book is an ideal reference source for medical practitioners, medical professionals, and researchers interested in emerging trends in alternative medicinal practices.

Nursing children and young people is increasingly complex requiring nurses to apply their knowledge and skills to a wide scope of illnesses and situations.

The challenges to nurses to analyse, reflect on different perspectives and then adapt practices to the benefit of service users are reflected in this book.

Each scenario in this text is created based on real life cases and practice. The 23 cases connect knowledge with practice and guide you through the anatomy and physiology and the physical and psychological responses to stressors, which are then linked to intervention decisions. Cases include: •

Providing care for children and young people with life-limiting conditions • Acutely ill children including those with asthma, and an infant with pyrexia and febrile convulsions • Long term conditions including

diabetes, renal disease and the transfer to adult services • Those who are critically ill such as a child with typhoid fever and a toddler with a head injury • Supporting emotional and mental health in anorexia and autistic spectrum disorder • Promoting healthy lifestyles, considering obesity and risky behaviour • Care for children with trauma, including a child with a learning disability Remaining vigilant for indicators of safeguarding concern, encouraging self-care, and promoting mental resilience are all incorporated, with examples from a range of care environments. Calculation exercises are interspersed to keep these skills sharp. This Case Book is an ideal learning resource, tailored to help nurses learn in a focused way about practice and excel, whether on placements, in academic work, or in professional practice. "Developed from a partnership between a University Research Group and an NHS Trust, this practical children's nursing case textbook bridges theory and practice by presenting 23 case scenarios on complex, sensitive and difficult to manage clinical situations in an accessible and user-friendly manner. The inbuilt activities, calculation exercises, question and answer format and extra resources make this an excellent interactive resource for nurses to engage in critical thinking and reflection about each case." Dr. Veronica Lambert, Senior Lecturer Children's Nursing, Dublin City University, Ireland "This book will be useful for nurses in the UK who work with

children and families in a variety of settings. Its format based on case studies and 'what would you do' and 'what do you need to do' scenarios will make it a useful tool for teaching clinical care for children and families." Professor Linda Shields, School of Nursing, Midwifery and Indigenous Health, Charles Sturt University, Bathurst, Australia "What Tony Long has achieved is to produce a textbook with contributions from esteemed practicing children's nurses which gives enhanced credibility to each of the case studies. Tony and his colleagues have created these case studies to help children's and young people's nurses fully understand the complexities of the needs of both children and their families or carers during their healthcare trajectory. The contributors to this textbook fully appreciate that the specificity of knowledge and its application to practice across the parameters of healthcare delivery and across the life course healthcare journey of the child, from the neonatal period through to adolescent transition to adult healthcare, requires a specific knowledge source. This book reflects the reality that children's nurses work in many areas from primary care through to tertiary care, from neonatal intensive care through to child and adolescent mental healthcare. Each of the case studies provides a focal point for this knowledge source and each seeks to illuminate good practice based on sound empirical evidence. The burden of ill

health in childhood can only be alleviated if the nurses who deliver care to children and young people fully understand the complexities of ill health across the age continuum. This is because of what can happen during childhood, from conception onwards, ranging from obesity, heart disease and mental ill health, though to educational attainment and future economic status. Professor Long and his colleagues are to be congratulated in producing this new book which will address each of these cognate areas but which also never forgets the primary mission of the children's nurse which is to uphold their mantra of 'the child first and always.'" Alan Gasper, Emeritus Professor of children's and young people's nursing at the University of Southampton, UK

The book is user friendly and provides a stepwise up-to-date treatment.

Compact, yet comprehensive, Manual of Critical Care Nursing: Interprofessional Collaborative Management, 8th Edition is the go-to reference for helping you provide safe, high-quality nursing care in critical care settings. Written in an abbreviated outline format, it presents essential information on more than 75 disorders and conditions, as well as concepts relevant to caring for critically ill patients and functioning in the critical care environment.

Award-winning clinical nurse specialist Marianne Baird separates the content first by body system and

then by disorder, with each disorder including a brief description of pathophysiology, assessment, diagnostic testing, collaborative management, nursing diagnoses, desired outcomes, nursing interventions, and patient teaching and rehabilitation. Coverage of more than 75 disorders most commonly seen in progressive and critical care settings equips you with all the content needed to handle problems in critical care nursing. Consistent, easy-to-use format mirrors a practicing nurse's approach to patient care and facilitates quick reference to vital information. Diagnostic Tests tables highlight the definition, purpose, and abnormal findings for each test. Gerontologic considerations and bariatric considerations are highlighted throughout to direct attention to patients with unique needs in critical care settings. NOC outcomes and NIC interventions apply standardized nursing taxonomies to the disorders and conditions most commonly encountered in progressive and critical care settings. Portable size makes it ideal for use on the unit or at the bedside. Safety Alert! and High Alert! boxes call attention to issues vital to patient safety. NEW! Focused content and a more streamlined, quick-reference format emphasize generic "patient problems" language in lieu of nursing-specific diagnoses to promote interprofessional collaboration and improved communication facilitated by a shared language. UPDATED! Comprehensive coverage reflects the

latest evidence-based practice and national and international treatment guidelines. NEW and UNIQUE! Coverage of interprofessional collaborative management includes Interprofessional Collaborative Management headings and tables that concisely summarize relevant performance measures while incorporating the best available patient care guidelines. NEW! Enhanced focus on need-to-know content facilitates quicker information retrieval in time-sensitive high acuity, progressive, and critical care settings.

This 2nd edition is the ideal resource for paramedics and student paramedics looking for a quick reference guide to help develop or refresh their assessment skills with up to date knowledge. This handy pocket sized book can be used by students for exam revision, by paramedics and emergency care staff en route to a call, or clinicians who are working in other clinical environments, such as urgent care centres to revisit key points and further refine their skills. Divided into body systems, the book takes the reader through the considerations and actions required for each type of emergency presentation. The book also:

- Takes an approach that mirrors current UK and international practice
- Features a cardiovascular chapter which includes sepsis, red flag sepsis and The UK Sepsis Trust Pre-hospital Sepsis Screening and Action Tool
- Uses red flags to highlight where immediate action may be

needed and identifies appropriate actions to be taken • Has been updated where applicable against the current Ambulance Clinical Guidelines, and the National Institute for Health and Care Excellence Guidelines • Considers the social, ethical and legal factors that might impact on care • Includes specific chapters in the specialist fields of paediatric assessment and neonatal assessment and care • Has been updated for this 2nd edition with new chapters on the assessment of minor injuries and minor ailments • Features extra web links for further reading at the end of chapters and a new book glossary • Uses mnemonics, cases and diagrams to demonstrate and reinforce key points, with many new diagrams for this edition Written by experienced paramedics, specialist health care professionals and doctors, this book will enhance knowledge and encourage accurate, timely and thorough assessment of patients across the lifespan. "...This book clearly sets out and balances the critical, unscheduled and urgent care assessment priorities for paramedic students and those who are looking to refresh their skills. The content, depth of discussion and signposting within the book clearly highlight and discuss critical points for the reader which are supported with appropriate supporting evidence ...We recommend this book to all of our paramedic students, and it should be an 'essential' purchase for all discerning paramedic students whether they

are embarking on their studies or refreshing and updating their skills...” Mark Nevins, Programme Leader, Paramedic Practice Programme, Teesside University, UK “This second edition draws on additional guidelines and best practice to elegantly illustrate the fundamental knowledge and skills required to undertake a comprehensive, evidence based approach to patient assessment. The book builds on the plethora of knowledge and understanding of patient assessment, from common presentations through to complex specialisms which require a focused and often prompt response from the out-of-hospital care provider. This book is ideally suited to the undergraduate paramedic student, along with experienced paramedics wishing to review their assessment techniques.” John Donaghy, Principal Lecturer and Professional Lead, Paramedic Science, University of Hertfordshire, UK

Severe asthma is a form of asthma that responds poorly to currently available medication, and its patients represent those with greatest unmet needs. In the last 10 years, substantial progress has been made in terms of understanding some of the mechanisms that drive severe asthma; there have also been concomitant advances in the recognition of specific molecular phenotypes. This ERS Monograph covers all aspects of severe asthma – epidemiology, diagnosis, mechanisms, treatment and management – but has a particular focus on

recent understanding of mechanistic heterogeneity based on an analytic approach using various 'omics platforms applied to clinically well-defined asthma cohorts. How these advances have led to improved management targets is also emphasised. This book brings together the clinical and scientific expertise of those from around the world who are collaborating to solve the problem of severe asthma.

An essential text for the aspiring student paramedic, *Fundamentals of Paramedic Practice* makes paramedic science and pre-hospital care accessible, straightforward and exciting. It assumes no prior knowledge of the subject, presenting the must-have information that students need about both the theory and practice of what it means to be a paramedic. With extensive full-colour illustrations throughout, as well as activities and scenarios, this user-friendly textbook will support paramedic students throughout their course.

This clinical handbook is designed to aid with the fast and accurate diagnosis of cardiopulmonary disease. Chapters are structured to support the clinical decision-making process and cover key points such as differential diagnosis, typical and atypical presentation, co-morbidities, and critical steps that should not be missed. The text also outlines time-dependent interventions, overall principles of treatment, and disease course.

Abundant images and links to external audio and

video resources reinforce understanding. Although the chapters are organized to provide ready access to essential information, the scope of the book is comprehensive and addresses topics including acute coronary syndrome, heart failure, pulmonary embolism, primary and secondary lung diseases, and relevant upper gastrointestinal and neuromuscular diseases. Both adult and pediatric considerations are presented. The book is intended for diagnosticians in emergency medicine, critical care, internal medicine, primary care, and related fields. Medical students, residents, and other medical professionals will appreciate the concise and clear approach.

Enormous progress in asthma research has been made in the past 50 years, including a greater understanding of its complex pathogenesis and new and more effective therapies. Consequently, the scientific literature has grown vast and can be difficult to integrate. With contributions from a distinguished panel of world-renowned authors, *Clinical Asthma*

Davis's Q&A Review for the NCLEX-RN® gives you an overview of the latest test plan and outlines the test-taking strategies you need to prepare for the exam. The only book featuring nursing care plans for all core clinical areas, Swearingen's All-In-One Nursing Care Planning Resource, 4th Edition provides 100 care plans with the nursing diagnoses and interventions you need to know to care for patients in all settings. It includes care plans for medical-surgical, maternity/OB, pediatrics, and psychiatric-mental health, so you can use just one book throughout your entire nursing curriculum. This edition includes a new care plan addressing normal labor and birth, a new full-color design, new QSEN safety icons, new quick-reference color tabs, and updates reflecting the latest NANDA-I nursing diagnoses and collaborative problems. Edited by nursing expert Pamela L. Swearingen, this book is known for its clear approach, easy-to-use format, and straightforward rationales. NANDA-I nursing diagnoses are incorporated throughout the text to keep you current with NANDA-I terminology and the

latest diagnoses. Color-coded sections for medical-surgical, maternity, pediatric, and psychiatric-mental health nursing care plans make it easier to find information quickly. A consistent format for each care plan allows faster lookup of topics, with headings for Overview/Pathophysiology, Health Care Setting, Assessment, Diagnostic Tests, Nursing Diagnoses, Desired Outcomes, Interventions with Rationales, and Patient-Family Teaching and Discharge Planning. Prioritized nursing diagnoses are listed in order of importance and physiologic patient needs. A two-column format for nursing assessments/interventions and rationales makes it easier to scan information. Detailed rationales for each nursing intervention help you to apply concepts to specific patient situations in clinical practice. Outcome criteria with specific timelines help you to set realistic goals for nursing outcomes and provide quality, cost-effective care. NEW! Care plan for normal labor and birth addresses nursing care for the client experiencing normal labor and delivery. UPDATED content is written by practicing clinicians and covers the latest clinical developments, new pharmacologic treatments, patient safety considerations, and evidence-based practice guidelines. NEW full-color design makes the text more user friendly, and includes NEW color-coded tabs and improved cross-referencing and navigation aids for faster lookup of information. NEW! Leaf icon highlights coverage of complementary and alternative therapies including information on over-the-counter herbal and other therapies and how these can interact with conventional medications. This book comprehensively presents all the necessary information health professionals need to become Certified Asthma Educators. Competent asthma educators must possess a number of skills: they must have appropriate and sound medical and pharmaceutical knowledge; be proficient and effective educators who can influence their patients

behaviors for the better; and, finally, they need the administrative and organizational skills needed to set up and run efficient clinics at their places of work. The book is divided into three sections to meet those needs: Asthma: The Fundamentals; The Role of Education; and, The Effective Asthma Educator. The first section covers clinical knowledge of asthma, with chapters including lung structure and function, clinical presentation of asthma, and environmental issues in asthma management. The second section delves into the role of educating patients and teaches readers how to best do that with an integrated approach between physician, educator, and patient. The third section looks further into educating techniques with a view of the learning process, considerations for instruction locations, and the role the educator plays overall. The final chapter in the book presents example cases for readers to assess the knowledge they have learned throughout. This second edition serves as both textbook and study guide for certification as well as a long-term reference publication. It has been fully updated from the previous edition with the latest treatment guidelines, medications, and disease monitoring methods. This is an ideal guide for asthma educators, those seeking NAECB certification, and any health professional involved with individuals who have asthma.
