presentation of a key nursing philosophy or theory. Case studies and critical thinking activities help bridge the gap between theory and application. A case study at the end of each theorist chapter puts the theory into a larger perspective, helping you understand how the information can be applied to practice. A Major Concepts & Definitions box in each theorist chapter outlines and summarizes the theory's most significant ideas and clarifies content-specific vocabulary. Each theorist chapter concludes with an extensive bibliography outlining numerous primary and secondary sources of information ideal for research projects. Critical Thinking Activities at the end of each theorist chapter challenge you to process the theory presented and apply it to personal and hypothetical practice situations. Introductory chapters provide you with a strong foundation in the history and philosophy of science, logical reasoning, and the theory development process. Diagrams for theories help you visualize and better understand inherently abstract concepts. Each theorist chapter is written by a scholar specializing in that particular theorist's work — often an individual who has worked closely with the theorist. Most chapters have been reviewed and edited by the theorist for currency and accuracy, further validating the accounts set forth in the text. Theorist birth (and if applicable, death) dates help you place each individual into a time context. A new chapter introduces the theorist Afaf Meleis and covers her Transition Theory that has helped shape the theoretical development of nursing. Points for further study at the end of each chapter direct you to assets

available for additional information. Need to know information is highlighted in at-a-glance summary boxes throughout to help you quickly review key concepts. Personal quotes from the theorists help you gain insight and make each complex theory more memorable. Updated references include only published works to ensure accuracy and credibility.

Practitioners across many counselling approaches acknowledge that the therapeutic relationship is central to therapy and its outcomes. This book argues that the therapeutic relationship cannot be reduced to particular words or therapeutic skills, but is a relationship encounter that promotes dialogue, contact and process. In each chapter, experts in different fields interpret the therapeutic relationship through the lens of their own modality, offering:

- Summaries of the key theoretical and research bases
- Example case studies of therapeutic interventions that illuminate key relational components of the approach and the development and management of the therapeutic relationship
- Study of the limitations, challenges and complexities of maintaining a therapeutic relationship
- Exploration of new developments in working with clients - capturing work that the authors and other colleagues have been involved in developing in that area

Stephen Paul is a client-centred psychotherapist, practising in the areas of therapy, supervision and coaching. He retired as Director of The Centre for Psychological Therapies at Leeds Metropolitan University, UK in 2012 after 20 years of service. The editors and authors of this book have produced a volume of theory and practice that has tremendous breadth and scope and that is a thorough analysis of the many facets of the therapeutic relationship. Rich in knowledge and practical applications, the authors demonstrate not only an understanding of their field, but also an ability to communicate this with vignettes and examples that are relevant and enable understanding for both students and practitioners alike. The limitations and challenges of each approach are recognised and a detailed list of further references is given for the reader to explore if desired. I highly recommend this book for both students and practitioners and congratulate the editors and authors on their work. I will certainly use it in our Counselling Education Programs for both Bachelor and Master of Counselling students. Though cancer was once considered to be a problem primarily in wealthy nations, low- and middle-income countries now bear a majority share of the global cancer burden, and cancer often surpasses the burden of infectious diseases in these countries. Effective low-cost cancer control options are available for some malignancies, with the World Health Organization estimating that these interventions could facilitate the prevention of approximately one-third of cancer deaths worldwide. Effective cancer treatment approaches are also available and can reduce the morbidity and mortality due to cancer in low-resource areas. But these interventions remain inaccessible for many people in the world, especially those residing in low-resource communities that are characterized by a lack of fundsâ€"on an individual or a societal basisâ€"to cover health infrastructure and care costs. As a result, worse outcomes for patients with cancer are more common in low- and middle-income countries compared with high-income countries. Few guidelines and strategies for cancer control consider the appropriateness and feasibility of interventions in low-resource settings, and this may undermine the effectiveness of care. Recognizing the challenges of providing cancer care in resource constrained settings, the National Academies of Sciences, Engineering, and Medicine developed a two-workshop series examining cancer care in low-

resource communities, building on prior work of the National Academies. The first workshop, held in October 2015, focused on cancer prevention and early detection. The second workshop was held in November 2016, and focused on cancer treatment, palliative care, and survivorship care in low-resource areas. This publication summarizes the presentations and discussions of this workshop. Topics include clinical knowledge development, moral injury, battlefield resuscitation, battlefield transport, Ethical decision-making, PTSD and sequelae of war, military families, quality of life and reintegration, transplantation, burns, heavy metal toxicity, battlefield toxicology, infectious disease, monitoring of pandemics, epigenetics of agent orange, CAM, malignant hyperthermia and caffeine abuse, and pain management.
