Migratory farm workers provide the extra hands that are so badly needed during the planting and harvest season in the United States. Although these workers have been essential to the American agricultural system for more than a hundred years, our knowledge of them is limited and quite fragmentary; it can be divided roughly into two types of information. On the one hand, we have the statistical data collected by various censuses and the data gathered by agricultural economists to study the supply of and demand for farm labor. The economic aspects of farm labor generally predominate in such material. On the other, we have the scientific studies and journalistic descriptions that report on migratory farm by using a qualitative approach. The social scientists and journalists who workers have compiled these reports lived in the labor camps and have vividly described the dismal and oppressive conditions these workers must endure. The drawback of the first type of data is that its orientation to economic problems makes it too superficial and one-sided. It fails to interrelate the diverse economic factors affecting the lives and work of all farm workers, and consequently presents a distorted and incomplete picture of migratory farm worker life. Also, because the migratory farm workers are quite elusive and usually keep a low profile, they are often underrepresented in such data. The data gathered by using qualitative methods have the major disadvantage of being quite limited in scope.

Although everyone agrees on the need to make government work better, few understand public bureaucracy sufficiently well to offer useful suggestions, either theoretical or practical. In fact, some consider bureaucratic efficiency incompatible with democratic government. Douglas Yates places the often competing aims of efficiency and democracy in historical perspective and then presents a unique and systematic theory of the politics of bureaucracy, which he illustrates with examples from recent history and from empirical research. He argues that the United States operates under a system of "bureaucratic democracy," in which governmental decisions increasingly are made in bureaucratic settings, out of the public eye. He describes the rational, self-interested bureaucrat as a "minimaxer," who inches forward inconspicuously, gradually accumulating larger budgets and greater power, in an atmosphere of segmented pluralism, of conflict and competition, of silent politics. To make the policy process more competitive, democratic, and open, Yates calls for strategic debate among policymakers and bureaucrats and insists that bureaucrats should give a public accounting of their significant decisions rather than bury them in incremental changes. He offers concrete proposals, applicable to federal, state, and local governments, for simplifying the now-chaotic bureaucratic policymaking system and at the same time bolstering representation and openness. This is a book for all political scientists, policymakers, government officials, and concerned citizens. It may well become a classic statement on the workings of public bureaucracy.

Collaboration between government agencies, an old joke goes, is an unnatural act committed by nonconsenting adults. Eugene Bardach argues that today's opinion climate favoring more results-oriented government makes collaboration a lot more natural—though it is still far from easy. In this book, Bardach diagnoses the difficulties, explains how they are sometimes overcome, and offers practical ideas for public managers, advocates, and others interested in developing interagency collaborative networks. Bardach provides examples from diverse policy areas, including children, youth, and family services; welfare-to-work; antipollution enforcement; fire prevention; and ecosystem management.
