ONE OF THE NEW YORK TIMES BOOK REVIEW'S 10 BEST BOOKS OF THE YEAR A major book about the future of the world, blending intellectual and natural history and field reporting into a powerful account of the mass extinction unfolding before our eyes Over the last half a billion years, there have been five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. This time around, the cataclysm is us. In *The Sixth Extinction*, two-time winner of the National Magazine Award and *New Yorker* writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamanian golden frog, staghorn coral, the great auk, and the Sumatran rhino. Through these stories, Kolbert provides a moving account of the disappearances occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up through the present day. The sixth extinction is likely to be mankind's most lasting legacy; as Kolbert observes, it compels us to rethink the fundamental question of what it means to be human.

Questo settimo volume della saga di fantascienza creata da Rick Remender, con gli straordinari disegni di Matteo Scalera e i colori di Moreno Dinisio orienta la trama verso il suo rush finale. La cosa più bella delle storie di Remender è che per quanto la premessa possa essere avventurosa, al cuore di ogni trama ci sono gli individui, le loro debolezze, il loro desiderio di redenzione. Ed è questo che sta succedendo a Grant McKay, che ha sacrificato il proprio prodigioso intelletto per salvare la figlia e ora non è certo di essere abbastanza intelligente per poter salvare il resto della sua famiglia e il multiverso. Privato della sua arma più affilata – il suo intelletto – ha solo i propri sentimenti per resistere all'annichilimento che incombe, ed è per questo che questo volume è una bomba emotiva.

The extent to which human activity has influenced species extinctions during the recent prehistoric past remains controversial due to other factors such as climatic fluctuations and a general lack of data. However, the Holocene (the geological interval spanning the last 11,500 years from the end of the last glaciation) has witnessed massive levels of extinctions that have continued into the modern historical era, but in a context of only relatively minor climatic fluctuations. This makes a detailed consideration of these extinctions a useful system for investigating the impacts of human activity over time. Holocene Extinctions describes and analyses the range of global extinction events which have occurred during this key time period, as well as their relationship to both earlier and ongoing species losses. By integrating information from fields as diverse as zoology, ecology, palaeontology, archaeology and geography, and by incorporating data from a broad range of taxonomic groups and ecosystems, this novel text provides a fascinating insight into human impacts on global extinction rates, both past and present. This truly interdisciplinary book is suitable for both graduate students and researchers in these varied fields. It will also be of value and use to policy-makers and conservation professionals since it provides valuable guidance on how to apply lessons from the past to prevent future biodiversity loss and inform modern conservation planning.

The threatened species categories used in Red Data Books and Red Lists have been in place for almost 30 years. The IUCN Red List Categories and Criteria provide an easily and widely understood system for classifying species at high risk of global extinction, so as to focus attention on conservation measures designed to protect them. This latest version of the classification system was adopted by the IUCN Council in February 2001 and reflects comments from the IUCN and SSC memberships and the final meeting of the Criteria Review Working Group.

"LATER THAN YOU THINK," Part One Trying to come to terms with her husband's legacy, Sara McKay wanders through countless realities looking for answers to one question: what are the choices that define her, and can she help right the infinite wrongs her husband set in motion? A new chapter in BLACK SCIENCE beings here!

Another body in a string of ritualistic murders. A serial killer who's getting cocky. Detective Derek Childress thinks this day just can't get any worse. And then he meets his new partner. Investigator Kayle Perrine is a Variant: one of several races of once-thought mythical creatures who now live among and lord-over humankind. Led by a group of vampires called the Clan Gentry, the Variants protect their own, just as they did when Derek's previous partner was killed by one, nearly a year ago. Now that Perrine's on the case, Derek expects a cover-up. Kayle Perrine has worked his whole life to prove himself, but being paired up with a boorish mundane like Derek Childress is feeling more like punishment than reward. Derek is so blinded by his prejudice against Variants, that he refuses to see the evidence Kayle finds blatantly obvious. The sooner Kayle can close this case, the sooner he can go back home and forget about the infuriating human detective. A brutal attack forges a fragile truce between the two men, driving them together. Derek and Kayle must learn to trust and depend on each other while tempers flare and passions of every kind run hot between them. Yet as they begin to grow closer, one fact continues to keep them apart: they are from different worlds. With time running out to solve this case, Derek and Kayle understand that love may not be enough to overcome prejudice, politics, and murder.

The government said the Variants were dying off... That the beasts would be extinct in a matter of years... That the Allied States had returned to prosperity and freedom ... The government was dead wrong. Deep under the cities, the Variants weren't just hiding, they were breeding. While the human survivors of the Extinction Cycle built outposts and brought back industries, the monsters were building something of their own. Working with human collaborators, they constructed a vast underground organic network to control this new army and launch a blitzkrieg assault across the Allied States. After tunneling under the walls, the beasts managed to overwhelm even the most fortified outposts. Many of them fell within days, forcing the military to abandon bases and retreat. But not everyone is on the run. Team Ghost hunts a monster behind enemy lines that could change the tide of war. On the USS George Johnson, Doctor Kate Lovato and her team of scientists seek to understand and tap into the Variant network while oil tycoon S.M. Fischer and his engineers come up with a plan to help buy time for the remaining outposts. And, at Outpost Portland, Captain Reed Beckham and Master Sergeant Parker Horn investigate a frightening conspiracy involving the human collaborators. As the Variant armies surge across the Allied States, those working to stop them realize even desperate measures may not be enough to prevent the total annihilation of their country.
