Excerpt from Engineering as a Career: A Series of Papers by Eminent Engineers
"What can my boy do as an engineer? - what should he learn, or where should he go to school?" These and similar questions are asked every day by anxious mothers and fathers. The boy himself, as he approaches manhood, begins at first vaguely, then seriously, to consider these matters, and inquires how he may get into some job which will ultimately open opportunities for advancement. When we consider that each year there are ten thousand young men who start on an engineering course, and many others who would gladly do so if they knew how to proceed intelligently, the importance of a full and correct answer to these questions is apparent. If we assume that the cash outlay of the parents is at least \$500 per year for these ten thousand young men, or \$5,000,000 per annum, and that in addition there is an expenditure of time and energy which otherwise might be used in earning a living and represents the value of say another \$5,000,000, the financial importance of this problem becomes apparent.
