Licensing, Selling and Finance in the Pharmaceutical and Healthcare Industries is an assessment of the turbulent state of pharmaceutical and biotechnology markets as we enter the second decade of the 21st Century. At the same time, the book offers a cautionary evaluation of the future financing of innovation in terms of what's gone wrong and how to succeed in the future. Martin Austin explores the challenge that the pharmaceutical (and related) industries face in terms of balancing short term, cost containment and expenditure control in areas such as internal research and development; whilst embracing in-licensing and the acquisition of innovative therapies to counteract their impending portfolio weaknesses in the mid to longer term. The first part of the book provides an engaging and convincing perspective on the context in which the industry currently finds itself; the second part is a pragmatic guide to commercialising your intellectual property; including how to recognise and value what you have as well as the new ways of working that you will need to adopt when negotiating, collaborating and contracting in partnership and alliance with others. Commentators have described in great detail the cocktail of commercial, clinical and social issues that threaten to overwhelm the pharmaceutical industry; Martin Austin's book offers a very distinctive perspective on these issues and their solution.

This year's accountability hearings focused on three areas of particular interest: the arrangements for revalidation of doctors, which are to commence on 3 December 2012, and associated matters such as patient involvement and examination of the language competence of doctors; the professional leadership activity undertaken by the GMC in the last year; and the regulation activity undertaken by the GMC, including the establishment of the Medical Practitioner Tribunal Service. The Council is performing effectively in its two roles of defining and applying standards for the medical profession and providing a focus of professional leadership. The outcome of the Law Commission's consultation on professional regulation in the health and care sector, which proposed a formal role for the Health Committee in the accountability structures, is still awaited. Specific concerns included that whilst there has been some progress on the amendment of domestic legislation which restricts the language testing of doctors this is no substitute for the revision of the European legislation which presently prohibits language testing of doctors on a national basis. There have also been continued upward trends in complaints against doctors received by the GMC, and the Committee expects to examine in 2013 the outcomes of further research the GMC has commissioned into these trends. The Committee feels that the present 15-month target for the GMC to complete 90% of its fitness to practise cases should be lowered to 12 months. The Committee also welcomes proposed legislation to enable the GMC's investigatory arm to appeal against decisions made by the MPTS where the outcome of a hearing is disputed

Instructor Resources: Test bank, PowerPoint slides and a lesson plan for each chapter, answers to the study questions, guides to the case studies, and a transition guide to the new edition.

Here is a book that aggregates five years of experience of three successive R and D projects (ELCH, GetTogether, GROPIIS) covering technical and organizational issues of eProcurement. The projects, which were funded partly by the government and partly by industry and hospitals, looked at the characteristics of procurement processes and at standard technologies. Two of the projects included case studies (ELCH, GROPIIS), the third project focused on the development of standard business objects for eProcurement in healthcare (GetTogether). Together they form a rich source of information worth communicating to a large audience of experts and newcomers alike.
