These pages take the place of the traditional fill-in-the-blank study guides of the past, and students become responsible for their learning. Also included are Assessment pages for use at the end of each chapter. Utilizing short questions and answers, as well as multipart questions, they cover all the material taught in the chapter. Some chapters also have cause-and-effect charts and timelines. In the teacher's edition, scoring guides are provided for the writing assignments, diagrams, and other projects. They are designed so that teachers can decide the criteria to be scored and the points they wish to award each item. The scoring guides can be adapted by teachers who decide to assign other activities. Blank history trading cards, which can be used with any chapter a teacher chooses, are also provided. "Missouri Then and Now" Activity Book challenges students at the same time that it allows for flexibility in teaching and scoring.

It meets the market need for a resource that concisely encapsulates current knowledge on the medical management of specific topics in a setting relevant to the preoperative clinic. In so doing the book aims to improve patient care and safety, enhance resource use, facilitate appropriate and timely management of preexisting conditions and diminish patient concerns. Organized into sections according to body system, each section consists of chapters delineating a specific disorder. Each chapter starts with a clinical vignette followed by a question-and-answer style investigation of the relevant issues. These questions attempt to address commonly encountered clinical dilemmas where opinion often differs between, and occasionally within, medical sub-specialties. Expertly written chapters are also supplemented by a number of chapters which address special considerations such as the frail patient and chronic opioid use. Preoperative Assessment: A Case-Based Approach is an invaluable reference for all physicians involved in preoperative assessment including anesthesiologists, surgeons, internists, family doctors and residents in these fields. Nurse practitioners and other allied health professionals involved in preoperative evaluation may also find this a book a valuable and timely resource.
