The TOGAF 9 certification program is a knowledge-based certification program. It has two levels, leading to certification for TOGAF 9 Foundation and TOGAF 9 Certified, respectively. The purpose of certification to TOGAF 9 Certified is to provide validation that, in addition to the knowledge and comprehension of TOGAF 9 Foundation level, the Candidate is able to analyze and apply this knowledge. The learning objectives at this level therefore focus on application and analysis in addition to knowledge and comprehension.This Study Guide supports students in preparation for the TOGAF 9 Part 2 Examination, leading to TOGAF 9 Certified.

This text is a comprehensive, highly readable guide to how to undertake a literature review in health and social care, tailored specifically for postgraduate study. Essential reading for all those undertaking any study at post-graduate level, the book provides clarity and a step by step approach to doing a literature review from start to finish which will enable you to: • Identify which type of review is appropriate for your study • Select the literature that you need to include in your review • Search for, appraise and analyse relevant literature • Write up your review Crucially the book explores the common features of a broad range of types of literature review, which serve different functions – including the literature review that is a pre-requisite prior to a larger empirical study, and the literature review that is a study in its own right. With real-life examples of written research and succinct summaries at the end of each chapter, A Post-Graduate's Guide to Doing a Literature Review in Health and Social Care is the ideal text for students wanting to get the very most from their study.

Using examples from both adults and children, the authors explain and describe the complex integrated network of strategies that takes place in the minds of proficient readers, strategies that struggling readers have to learn in order to construct their own reading processes. This invaluable guide is designed to help parents and counselors build self-esteem in children from infancy through adolescence, fortifying them with a healthy sense of self-esteem for the rest of their lives. Whereas some professionals are content to teach parents about building only outer self-esteem, as in parents unconditionally praising the children, Dr. Owens believes it is also essential to bolster a child's inner self-esteem. This way a child feels good from within, knows objectively that he's doing a good job, and is not solely dependent on the praise of others. While Dr. Owens believes strongly that parents must give children unconditional love, she is well aware that the world can be a harsh and difficult place. Therefore, she shows that the best gift a parent can give one's children is the tools to acquire the skills and behavior that will enable them to feel good about themselves - from within. This unique book imparts vital information on how parents can instill a sense of pride in their child each step of the way as the child's mind grows in perception and logic. Dr. Owens explains what behavior to expect from children at each developmental stage. She also supplies ample questionnaires so parents can determine the state of their children's sense of self-esteem. Most important, she wisely recognizes the needs of special groups of children. She thus offers specific advice for boosting the self-esteem of children who are shy, aggressive, unpopular, learning disabled, or gifted, as well as adopted children, only children, and children of working mothers, divorced parents, step-families, single parents, and same-sex parents.

Modelling has permeated virtually all areas of industrial, environmental, economic, bio-medical or civil engineering: yet the use of models for decision-making raises a number of issues to which this book is dedicated: How uncertain is my model ? Is it truly valuable to support decision-making ? What kind of decision can be truly supported and how can I handle residual uncertainty ? How much refined should the mathematical description be, given the true data limitations ?

Could the uncertainty be reduced through more data, increased modeling investment or computational budget ? Should it be reduced now or later ? How robust is the analysis or the computational methods involved ? Should / could those methods be more robust ? Does it make sense to handle uncertainty, risk, lack of knowledge, variability or errors altogether ? How reasonable is the choice of probabilistic modeling for rare events ? How rare are the events to be considered ? How far does it make sense to handle extreme events and elaborate confidence figures ? Can I take advantage of expert / phenomenological knowledge to tighten the probabilistic figures ? Are there connex domains that could provide models or inspiration for my problem ? Written by a leader at the crossroads of industry, academia and engineering, and based on decades of multi-disciplinary field experience, Modelling Under Risk and Uncertainty gives a self-consistent introduction to the methods involved by any type of modeling development acknowledging the inevitable uncertainty and associated risks. It goes beyond the "black-box" view that some analysts, modelers, risk experts or statisticians develop on the underlying phenomenology of the environmental or industrial processes, without valuing enough their physical properties and inner modelling potential nor challenging the practical plausibility of mathematical hypotheses; conversely it is also to attract environmental or engineering modellers to better handle model confidence issues through finer statistical and risk analysis material taking advantage of advanced scientific computing, to face new regulations departing from deterministic design or support robust decision-making. Modelling Under Risk and Uncertainty: Addresses a concern of growing interest for large industries, environmentalists or analysts: robust modeling for decision-making in complex systems. Gives new insights into the peculiar mathematical and computational challenges generated by recent industrial safety or environmental control analysis for rare events. Implements decision theory choices differentiating or aggregating the dimensions of risk/aleatory and epistemic uncertainty through a consistent multi-disciplinary set of statistical estimation, physical modelling, robust computation and risk analysis. Provides an original review of the advanced inverse probabilistic approaches for model identification, calibration or data assimilation, key to digest fast-growing multi-physical data acquisition. Illustrated with one favourite pedagogical example crossing natural risk, engineering and economics, developed throughout the book to facilitate the reading and understanding. Supports Master/PhD-level course as well as advanced tutorials for professional training Analysts and researchers in numerical modeling, applied statistics, scientific computing, reliability, advanced engineering, natural risk or environmental science will benefit from this book.

"Around the world every year many thousands of students have to complete dissertations or theses as part of their undergraduate or masters studies in tourism and related subjects. Often the dissertation or thesis represents the culmination of their programme as a substantial piece of self-directed work. More than just a means to consolidate their final grade, it is also an exciting chance to conduct intensive research on a topic of their choosing. It can also be a gateway to further periods of study as well as job offers and future career paths. Yet for all these reasons, the dissertation is viewed by many students as a tricky challenge. This book intends to take the stress and anxiety out of doing a dissertation in tourism studies and related disciplines. The dissertation process is examined from the germination of an idea to the submission, presentation and assessment of the final document. We offer a framework for conducting dissertations in the English-speaking world which students can adopt to varying degrees in their research at the undergraduate and masters levels. We aim to debunk the popular myths and common pitfalls of doing a dissertation. Rather than view the dissertation as a single, overwhelming project, the dissertation is presented as a series of more modest, manageable yet crucially inter-linked tasks that all students can successfully complete through effective time management"--
