This unique volume explores issues related to working with children who have nonverbal learning disability (NVLD). It examines how a child's psychology - thoughts, feelings, beliefs - affects his or her functioning and learning. In addition, the book addresses how a child's experiences are processed through individual personality, psychology, culture, environment and economic circumstances, and family dynamics. Using these psychological organizing principles, the book describes how to work most effectively with young patients with NVLD. It offers a new model and definition for

understanding NVLD, emphasizing its core deficit of visual-spatial processing. In addition, this book addresses efforts to rename NVLD to developmental visual-spatial disorder (DVSD). It describes the 11 possible subtypes as including a primary deficit in visual-spatial processes and impairment in several additional functional domains, including executive functioning, social/emotional deficits, academic achievement, and motor coordination. The book highlights the need for psychologically minded treatment and provides specific intervention guidelines. It details how to conduct the intake process and create a treatment plan and team and offers practical suggestions for working with a patient's family members. In addition, the book addresses the importance of working with a consistent psychological theory, such as control mastery theory (CMT). It describes the Brooklyn Learning Center Model for treating NVLD and offers guidelines for interventions to support patients academically. The book provides a comprehensive approach to the neuropsychological assessment of NVLD as well as examples of visual-spatial, sensory perception, executive functioning, academics, social/emotional deficits and motor coordination interventions, and all forms used to gather information from patients. Key areas of coverage include: Definition of nonverbal learning disability (NVLD). Efforts toward inclusion in the Diagnostic

and Statistical Manual (DSM) and for renaming it to a developmental visual-spatial disorder (DVSD) Guide to general diagnostic testing and assessment. Developing a treatment plan and team for NVLD patients. NVLD therapy and tutoring priorities. NVLD and Developmental Visual-Spatial Disorder in Children is an essential reference for clinicians, therapists, and other professionals as well as researchers, professors, and graduate students in school and clinical child psychology, special education, speech-language therapy, developmental psychology, pediatrics, social work as well as all interrelated disciplines.

This book is designed to meet the need for a practically oriented textbook on the rapidly growing field of continuous EEG (cEEG) monitoring. A wide range of key clinical aspects are addressed, with explanation of status epilepticus classification, criteria for institution of monitoring, seizure patterns and their recognition, quantitative EEG analysis, and neuroimaging in patients undergoing cEEG monitoring. The

Bookmark File PDF Cpt Manual Professional Edition 2013

value of cEEG and the nature of cEEG findings in various special situations are then reviewed, covering particular pathologies, critical care considerations, and prognostication. Treatments of nonconvulsive status epilepticus (NCSE) and nonconvulsive seizures (NCS) are discussed. The concluding section is devoted to important administrative issues including billing, staffing issues, comparison of EEG machines, and information technology (IT) issues. Continuous EEG monitoring offers the only reliable means of detecting seizures that are not clinically obvious in critically ill patients. Such seizures are common: approximately 20% of patients undergoing cEEG monitoring in hospital have NCSE or NCS. Against this background, many hospitals have started to offer cEEG monitoring as a basis for delivery of appropriate treatment. By presenting the state of the art in cEEG monitoring, this book will be invaluable to practitioners including neurophysiologists, neurologists, neurointensivists, intensivists, neurophysiology and epilepsy fellows, and neurology residents.
