

Differential Diagnosis In Surgical Diseases 1st Edition

This new reference is an extraction of all surgery-related information from the key reference text 'French's Index of Differential Diagnosis'. 'French's Index of Differential Diagnosis' is a key Butterworth-Heinemann medical text, catering as it does for all the medical and surgical subspecialties. About 30% of the content of the book relates to surgical conditions and their differential diagnosis. A new book based on the larger text, 'French's Index of Surgical Differential Diagnosis' extracts the surgical conditions and presents them in a more synoptic form for those specifically interested in the surgical content.

Diagnosis of benign liver tumors is experiencing exponential growth, mainly owing to the diffusion of more accurate imaging techniques. This monograph examines the epidemiology, histopathology and genetics of these tumors and provides a systematic overview of their evolution and differential diagnosis. Care is taken to document surgical indications accurately, with a view to assisting in the avoidance of useless interventions. Open, laparoscopic and robotic surgical techniques are described and illustrated, emphasizing the optimization of intra- and postoperative management in order to avoid potential complications and degeneration. In these chapters, attention is drawn to the ways in which the surgical management of benign liver tumors differs from that of malignant tumors. The book concludes by examining the role of interventional radiology in patients with benign liver tumors.

Diagnostic Atlas of Non-Neoplastic Lung Disease provides the practicing pathologist with the tools necessary to synthesize diagnoses in biopsy and surgical specimens of non-neoplastic lung disease. Classification of non-neoplastic lung disease has become increasingly complex, especially in diffuse lung diseases where terminology has been changing and clinical and radiologic input is advocated for diagnosis. As a result, general surgical pathologists may feel ill-equipped to interpret such specimens. In this heavily illustrated and concisely written book, Dr. Katzenstein, a leading authority in pulmonary pathology, has brought a pattern-based approach to formulating diagnoses in non-neoplastic lung diseases with the non-expert pulmonary pathologist in mind. Chapters are organized according to pattern of lung involvement with the idea that once the pattern is recognized the pathologist can easily find examples and review the relevant disease within the corresponding chapter. Filled with tips and key features to navigate differential diagnosis, Diagnostic Atlas of Non-Neoplastic Lung Disease is an indispensable guide for pathologists who encounter non-neoplastic lung specimens in the lab. Key Features: Written by a respected pulmonary pathologist with over 40 years' experience in the lab Over 350 high quality illustrative photomicrographs, many with low and high magnification views Emphasizes a pattern-based approach for formulating diagnoses Provides helpful tips for establishing diagnosis and avoiding misdiagnosis Relevant clinical information including patient demographics, presenting manifestations, and radiographic findings where important for pathologic diagnosis

Excerpt from Differential Diagnosis and Treatment of Disease: A d104-Book for Practitioners and Advanced Students

To bring the broad domain of practical medicine fairly within the grasp of the family physician, and to assist the advanced student in acquiring a clinical foundation has been my aim. The general practitioner, representing the unity and connection of the various branches of medical practice, must grasp the practical details of his art in order to be useful at the bedside; and a book to be of value to the family physician should convey clinical experience Without the exhaustive and often purely theoretical details to be found and sought for in monographs. Such a work I have endeavored to write. It has been my desire to reestablish the relations of internal medicine, surgery, and the several specialties; for this reason I have presented special istic methods from the view - point of the general clinician. Disease is neither medical nor surgical nor does it hover on the border lines, but the treatment of disease has become more surgical and the arbitrary division into medical and surgical disease is no longer tenable. This unitarian principle should not be ignored in the presentation of disease, and many methods of diagnosis and treatment originally worked out by the specialist have become, or should become, common property. Drugs no longer dominate our therapeutics; therefore the prominence given to hygienic, prophylactic, dietetic, hydrotherapeutic, and physical methods of treatment. At the same time Well-tried and valuable formulae are distributed throughout the book. In prescription writing the apothecaries' weight and not the metric system has been used. However, simple rules for converting one into the other are given. The special chapters on the Technique of Diagnosis and Laboratory Aids, on Paediatrics, and the various specialties, on diseases of the Osseous, Muscular, and Articular System, on Nutrition and Diet, on the Management of Dropsy and Effusion, on Massage, Vibration, Dry Hot Air Treatment, Poisons and Anaesthesia, it is to be hoped will not be an unwelcome addition to a book on practice. Each chapter is prefaced by a synopsis of its contents and by brief introductory remarks on the clinical pathology of its subjects. About the Publisher
