This honest, clearly written, and accessible book shows how to use Family Dialogue Journals (FDJs) to increase and deepen learning across grade levels. Written by K–12 teachers who have been implementing and studying the use of weekly journals for several years, it shares what they have learned and why they have found FDJs to be an invaluable tool for forming effective partnerships with families. Learn from first-hand accounts how students write weekly about one big idea they have studied, ask a family member a related question, and then solicit their writing in the journal. Through these journal entries, they share their family knowledge with classmates while actively engaging with the curriculum. In turn, teachers extend the academic discussion by writing to each family and incorporating their funds of knowledge into classroom lessons—writing about everything from the use of thermometers to life in Michoacán, Mexico. Family participation in the FDJs is remarkably high across ages, ethnicities, and economic realities. "This is an incredibly readable book that is highly useful for teachers, teacher educators, and university researchers interested in this powerful practice. The descriptions of the classrooms are riveting and

Until now, the poet Peter Orlovsky, who was Allen Ginsberg's lover for more than forty years, has been the neglected member of the Beat Generation. Because he lived in Ginsberg's shadow, his achievements were seldom noted and his contributions to literature have not been fully recognized. Now, this first collection of Orlovsky's writings traces his fascinating life in his own words. It also tells, for the first time, the intimate story of his relationship with Ginsberg. Drawn from previously unpublished journals, correspondence, photographs and poems, Peter Orlovsky, a Life in Words, begins as Orlovsky is discharged from the Army; follows the young man through years of self-doubt and details his first meeting with Ginsberg in San Francisco from his own perspective. In never-before-heard detail, Orlovsky describes his travels around the world with Ginsberg, Kerouac, Burroughs and Corso. The book also delves into the contradictions that ultimately defined him: best known as Ginsberg's lover, Orlovsky was heterosexual and always longed to be with women; his spirit was prescient of the flower children of the sixties - especially his inclinations toward devotion and love - but in the end his use of drugs took its toll on his body and mind, silencing one of the most original and inspiring voices of his generation.

Research on stress and coping phenomena has been among the most widely studied topics in social and behavioral sciences during the past several decades. Notwithstanding, the authors in this book have expanded the base of stress and coping research by providing a valuable reference source that includes guidelines and frameworks as well as empirical findings related to the application of mixed methods approaches to the study of stress and coping. This book is intended not only for stress and coping researchers, but also for social and behavioral science researchers at various levels—from students, instructors, and advisors to applied researchers, research methodologists, and theorists. The 15 chapters are divided into three distinct sections. The five chapters in Section I focus mainly on topics pertaining to the conceptual and theoretical aspects of mixed methods research in the study of stress and coping. The five chapters in Section II address the major methodological issues of mixed methods research. Section III presents five empirical studies of mixed methods research as applied to the field of stress and coping. This book illustrates the perspectives of innovative interconnections in the application of mixed methods research to the study of stress and coping. It also provides readers with new ways of designing and evaluating strategies and programs that aim to reduce stress and improve coping mechanisms.

In the past twenty years, the importance of reflection has been recognized by all professions, especially the education profession. In the field of education, terms and practices such as reflective practice, action research, journaling, collaborative observation, professional development, peer observation, and professional portfolios have become organizing units of discussion and practice. This book extends knowledge in the field, not just by providing prompts and examples of "things to do," but also by presenting an organized and cohesive system consisting of definitions, principles, and guidelines that can be used for all reflective practice activities. This system blends ideas and concepts from phenomenology, the Constructivist philosophy, experiential learning, critical reflection, theories on turning knowledge into action, and transformative learning. Moreover, the book creates a logical system for reflective practice that provides a foundation for a framework that organizes teacher transformation through reflection. This system is anchored by the practical examples provided, thus making this book practical for all those interested in improving student learning. The strength of this book is that it is not a recipe-type publication; rather it is a cohesive system which creates a rationale for the system, presents the system, and provides many examples. The intended audience includes practitioners, teacher educators, teacher candidates, and administrators.

This book is written by the authors of the acclaimed ""Introduction to Rubrics"". It has sold over 3,000 in 12 months. There is a major growth of interest in keeping journals or diaries for personal reflection and growth; and as a teaching tool. It will appeal to college faculty, administrators and teachers. One of the most powerful ways to learn, reflect and make sense of our lives is through journal keeping. This book presents the potential uses and benefits of journals for personal and professional development - particularly for those in academic life; and demonstrates journals' potential to foster college students' learning, fluency and voice, and creative thinking. In professional life, a journal helps to organize, prioritize and address the many expectations of a faculty member's or administrator's roles. Journals are effective for developing time management skills, building problem-solving skills, fostering insight, and decreasing stress. Both writing and rereading journal entries allow the journal keeper to document thinking; to track changes and review observations; and to examine assumptions and so gain fresh perspectives and insights over past events. The authors present the background to help readers make an informed decision about the value of journals and to determine whether journals will fit appropriately with their teaching objectives or help manage their personal and professional lives. They offer insights and advice on selecting the format or formats and techniques most appropriate for the reader's purposes.

Despite the publication of hundreds of textbooks in this field, each one intended to provide an improvement over previous textbooks, students of accounting continue to remain perplexed as a result of numerous subject areas that must be remembered and correlated when solving problems. Various interpretations of accounting terms also contribute to the difficulties of mastering the subject. In a study of accounting, REA found the following basic reasons underlying the inherent difficulties of accounting: No systematic rules of analysis were ever developed to follow in a step-by-step manner to solve typically encountered problems. This results from numerous different conditions and principles involved in a problem that leads to many possible different solution methods. To prescribe a set of rules for each of the possible variations would involve an enormous number of additional steps, making this task more burdensome than solving the problem directly due to the expectation of much trial and error. Current textbooks normally explain a given principle in a few pages written by an accounting professional who has insight into the subject matter not shared by others. These explanations are often written in an abstract manner that causes confusion as to the principle's use and application. Explanations then are often not sufficiently detailed or extensive enough to make the reader aware of the wide range of applications and different aspects of the principle being studied. The numerous possible variations of principles and their applications are usually not discussed, and it is left to the reader to discover this while doing exercises. Accordingly, the average student is expected to rediscover that which has long been established and practiced, but not always published or adequately explained. The examples typically following the explanation of a topic are too few in number and too simple to enable the student to obtain a thorough grasp of the involved principles. The explanations do not provide sufficient basis to solve problems that may be assigned for homework or given on examinations. Poorly solved examples such as these can be presented in abbreviated form which leaves out much explanatory material between steps, and as a result requires the reader to figure out the missing information. This leaves the reader with an impression that the problems and even the subject are hard to learn - completely the opposite of what an example is supposed to do. Poor examples are often worded in a confusing or obscure way. They might not state the nature of the problem or they present a solution, which appears to have no direct relation to the problem. These problems usually offer an overly general discussion - never revealing how or what is to be solved. Many examples do not include accompanying diagrams or graphs denying the reader the exposure necessary for drawing good diagrams and graphs. Such practice only strengthens understanding by simplifying and organizing accounting processes. Students can learn the subject only by doing the exercises themselves and reviewing them in class, obtaining experience in applying the principles with their different ramifications. In doing the exercises by themselves, students find that they are required to devote considerable more time to accounting than to other subjects, because they are uncertain with regard to the selection and application of the theorems and principles involved. It is also often necessary for students to discover those "tricks" not revealed in their texts (or review books) that make it possible to solve problems easily. Students must usually resort to methods of trial and error to discover these "tricks," therefore finding out that they may sometimes spend several hours to solve a single problem. When reviewing the exercises in classrooms, instructors usually request students to take turns in writing solutions on the boards and explaining them to the class. Students often find it difficult to explain in a manner that holds the interest of the class, and enables the remaining students to follow the material written on the boards. The remaining students in the class are thus too occupied with copying the material off the boards to follow the professor's explanations. This book is intended to aid students in accounting overcome the difficulties described by supplying detailed illustrations of the solution methods that are usually not apparent to students. Solution methods are illustrated

This book introduces community college faculty and faculty developers to the use of faculty learning communities (FLCs) as a means for faculty themselves to investigate and surmount student learning problems they encounter in their classrooms, and as an effective and low-cost strategy for faculty developers working with few resources to stimulate innovative teaching that leads to student persistence and improved learning outcomes. Two-year college instructors face the unique challenge of teaching a mix of learners, from the developmental to high-achievers, that requires using a variety of instructional strategies and techniques. Even the most experienced teachers can find this diversity demanding. Faculty developers at many two-year colleges still rely solely on the one-day workshop model that, while useful, rarely results in sustained student-centered changes in pedagogy or the curriculum, and may not be practicable for the growing cohort of part-time faculty members. By linking work in the classroom with scholarship and reflection, FLCs provide participants with a sense of renewed engagement and stimulate collegial exploration of ways to achieve educational excellence. FLCs are usually faculty-instigated and cross-disciplinary, and comprise groups of six to fifteen faculty that work collaboratively through regular meetings over an extended period of time to promote research and an exchange of experiences, foster community, and develop the scholarship of teaching. FLCs alleviate burnout and isolation, promote the development, testing, and peer review of new classroom strategies or technologies, and lead to the reenergizing and professionalization of teachers. This book introduces the reader to FLCs and to the Scholarship of Teaching and Learning, offering examples of application in two-year colleges. Individual chapters describe, among others, an FLC set up to support course redesign; an "Adjunct Connectivity FLC" to integrate part-time faculty within a department and collaborate on the curriculum; a cross-disciplinary FLC to promote student self-regulated learning, and improve academic performance and persistence; a critical thinking FLC that sought to define critical thinking in separate disciplines, examine interdisciplinary cross-over of critical thinking, and measure critical thinking more accurately; an FLC that researched the transfer of learning and developed strategies to promote students' application of their learning across courses and beyond the classroom. Each chapter describes the formation of its FLC, the processes it engaged in, what worked and did not, and the outcomes achieved. Just as when college faculty fail to remain current in their fields, the failure to engage in continuing development of teaching skills, will equally lead teaching and learning to suffer. When two-year college administrators restrain scholarship and reflection as inappropriate for the real work of the institution they are in fact hindering the professionalization of their teaching force that is essential to institutional mission and student success. When FLCs are supported by leaders and administrators, and faculty learn that collaboration and peer review are valued and even expected as part of being a teaching professional, they become intrinsically motivated and committed to collaboratively solving problems, setting the institution on a path to becoming a learning organization that is proactive and adept at navigating change.

In this volume, Julinna Oxley and Ramona Ilea bring together essays that examine and defend the use of experiential learning activities to teach philosophical terms, concepts, arguments, and practices. Experiential learning emphasizes the importance of student engagement outside the traditional classroom structure. Service learning, studying abroad, engaging in large-scale collaborative projects such as creating blogs, websites and videos, and practically applying knowledge in a reflective, creative and rigorous way are all forms of experiential learning. Taken together, the contributions to Experiential Learning in Philosophy argue that teaching philosophy is about doing philosophy with others. The book is divided into two sections: essays that engage in the philosophical debate about defining and implementing experiential learning, and essays that describe how to integrate experiential learning into the teaching of philosophy. Experiential Learning in Philosophy provides a timely reflection on best practices for teaching philosophical ideals and theories, an examination of the evolution of the discipline of philosophy and its adoption (or reclamation) of active modes of learning, and an anticipation of the ways in which pedagogical practices will continue to evolve in the 21st century.
