'Dennis McInerney's Publishing Your Psychology Research has bridged a gap in the research process literature, providing a well-oiled treaty from both insider and outsider perspectives as to what it takes to become a credible and published author' - Shawn Van Etten, Department of Psychology, State University of New York Institute of Technology at Utica-Rome 'Publish or perish' is the imperative in academic research. As students are now required to do postgraduate work in order to gain clinical qualifications, more are being exposed to the research culture than ever before. Academics are being pressured to increase their publishing output in peer-reviewed journals as a measure of their own and their university's success. Generally, researchers in psychology need to know how to get their work published in order to develop their reputation.

This volume looks at research methods through the lens of peace studies and peace values. Apart from reviewing established methods from peace psychology, it presents some innovative ideas for conducting research in the area of peace psychology. Many of these methods are drawn from the field, from activities used by active peace practitioners. A critical component of this volume is its core argument that peace research should be conducted by peaceful means, and should model peaceful processes. Organized thematically, the volume begins with a review of the established best practices in peace psychology research methodology, including methods for qualitative research, for quantitative research, and participative action networks. In doing so, it also points to some of the limitations of working for peace within the tradition of a single discipline and to the need to expand psychology methodology, to methodologies. Therefore, the second half of the volume proceeds to explore the realm of innovative, relatively unorthodox research methods, such as participatory and workshop methods, the creative arts, and sports for research purposes. The use of new advances in information technology to conduct peaceful research are also discussed. The concluding chapters synthesize key issues from the previous chapters, and links peace psychology with ideas and implementation of research designs and practices. Finally, it discusses the nature of academic knowledge, and more specifically, academic knowledge in peace psychology, and where that fits into the mission to build a more peaceful world. Overall this book aims to provide peace psychologists with an array of possibilities and best practices for approaching their research. Many researchers find the experience of doing research a somewhat lonely, if not isolating, experience. Methodologies in

Peace Psychology: Peace Research by Peaceful Means aims to alleviate this feeling as the use of these more innovative methods leads to a closer engagement with the community and a much more social experience of research. This volume is a useful tool for both new and experienced researchers because it provides leads for idealistic young researchers who want their work to make a difference, in addition to encouraging more reflection and analysis for experienced peace psychologists.

With an international and inter-disciplinary team of contributors the Handbook

of Sports Studies is comprehensive in scope, relevant in content and far-reaching in its discussion of future prospect. Donald R. McCreary and Joan C. Chrisler The Development of Gender Studies in Psychology Studies of sex differences are as old as the field of psychology, and they have been conducted in every subfield of the discipline. There are probably many reasons for the popularity of these studies, but three reasons seem to be most prominent. First, social psychological studies of person perception show that sex is especially salient in social groups. It is the first thing people notice about others, and it is one of the things we remember best (Fiske, Haslam, & Fiske, 1991; Stangor, Lynch, Duan, & Glass, 1992). For example, people may not remember who uttered a witty remark, but they are likely to remember whether the quip came from a woman or a man. Second, many people hold firm beliefs that aspects of physiology suit men and women for particular social roles. Men's greater upper body strength makes them better candidates for manual labor, and their greater height gives the impression that they would make good leaders (i. e. , people we look up to). Women's reproductive capacity and the caretaking tasks (e. g. , breastfeeding, baby minding) that accompany it make them seem suitable for other roles that require gentleness and nurturance. Third, the logic that underlies hypothesis testing in the sciences is focused on difference. Researchers design their studies with the hope that they can reject the null hypothesis that experimental groups do not differ.

"Offers a comprehensive introduction to the various methods, approaches, and strategies for conducting research in the clinical psychology field"--

A number of factors converged to prompt this volume at this particular time. For several years, supervisors in predoctoral and internship programs have noted the need for a compendium of selected articles to illustrate the range of research and practice of pediatric psychology. Although the field is still relatively young, the many new pediatric psychologists in recent years might benefit from a perspective on the history and development of the psychological concepts, the organizational home in the Society of Pediatric Psychology (Section V of the Division of Clinical Psychology of the American Psychological Association), and its publication archive, *Journal of Pediatric Psychology*. Such "classics" help capture the richness and excitement that portrays the field. Noting the continuing need for resources to serve the specialty, the Executive Committee of the Society of Pediatric Psychology authorized the sponsorship of publication of the *Handbook of Pediatric Psychology* (Routh, 1988) as a synthesis of the field by expert chapter authors. The Society then appointed a committee led by C. Eugene Walker and Annette M. La Greca to develop a series of biennial volumes entitled *Advances in Pediatric Psychology*. A number of discussions among the editorial board of the *Journal* and with Plenum Publishing Corporation, the *Journal's* publisher, recognized the value of articles carefully selected to exemplify how pediatric psychology is done.

This new edition of *Research and Evaluation in Education and Psychology* continues and expands upon the approach that made the First Edition an international bestseller. Author Donna Mertens explains quantitative, qualitative, and mixed methods, and incorporates the viewpoints of various research paradigms (postpositivist, constructivist, transformative, and pragmatic) into descriptions of these methods. Special emphasis is provided for conducting research in culturally complex communities, based on the perspectives of feminists, ethnic/racial minorities, and people with disabilities. Each chapter carefully explains a step of the research process from literature review to analysis and reporting. Additionally, sample studies and abstracts are included in each chapter to illustrate the concepts discussed in that section of the book. This volume represents a beginning effort to compile a history of educational psychology The project began, innocuously enough, several years ago when we decided to add mon material about the history of educational psychology to the undergraduate course we were teaching. What seemed like a simple task became very complex as we searched in vain for a volume dealing with the topic. We ended up drawing on various histories of psychology that devoted anywhere from a few paragraphs to several pages to the topic and on a very few articles addressing the issue. We were startled, frankly, by the apparent lack of interest in the history of our field and decided to attempt to compile a history ourselves. As is the case with any edited volume, the contributing authors deserve credit for its positive features. They uniformly made every effort asked of them and taught us much about educational psychology. Any errors or omissions are our responsibility alone.
