Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in

terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

Being healthy is much more than being physically fit and free from disease. Health is the state of well-being in which all of the components of health -- physical, emotional, social, mental, spiritual, and environmental -- are in balance. To be truly healthy, you must take care of all six components. - p. 11.

A New York Times bestseller! From the celebrated author of *Nickel and Dimed*, Barbara Ehrenreich explores how we are killing ourselves to live longer, not better. A razor-sharp polemic which offers an entirely new understanding of our bodies, ourselves, and our place in the universe, *NATURAL CAUSES* describes how we over-prepare and worry way too much about what is inevitable. One by one, Ehrenreich topples the shibboleths that guide our attempts to live a long, healthy life -- from the importance of preventive medical screenings to the concepts of wellness and mindfulness, from dietary fads to fitness culture. But *NATURAL CAUSES* goes deeper -- into the fundamental unreliability of our bodies and even our "mind-bodies," to use the fashionable term. Starting with the mysterious and seldom-acknowledged tendency of our own immune cells to promote deadly cancers, Ehrenreich looks into the cellular basis of aging, and shows how little control we actually have over it. We tend to believe we have agency over our bodies, our minds, and even over the manner of our deaths. But the latest science shows that the microscopic subunits of our bodies make their own "decisions," and not always in our favor. We may buy expensive anti-aging products or cosmetic surgery, get preventive screenings and eat more kale, or throw ourselves into meditation and spirituality. But all these things offer only the illusion of control. How to live well, even joyously, while accepting our mortality -- that is the vitally important philosophical

challenge of this book. Drawing on varied sources, from personal experience and sociological trends to pop culture and current scientific literature, *NATURAL CAUSES* examines the ways in which we obsess over death, our bodies, and our health. Both funny and caustic, Ehrenreich then tackles the seemingly unsolvable problem of how we might better prepare ourselves for the end -- while still reveling in the lives that remain to us.

If you want to build muscle and lose fat easily, effectively, and rapidly...and if you'd like to rid yourself of all kinds of bad advice and habits that are making getting into great shape much harder than it should be...then you need to read this book. Let me ask you a question. Do any of the following claims sound familiar? "I have bad genetics--I just can't build muscle or lose fat easily." "You have to work your abs more to get a six-pack." "When doing cardio, you want your heart rate in the 'fat burning zone.'" "Don't eat carbohydrates--they make you fat." "Don't eat at night if you want to lose weight." "If you wait too long in between meals, your body goes into 'starvation mode' and you will mess up your metabolism." "I'm overweight because I have a slow metabolism." You've probably heard one or more of these statements before, and the sad truth is lies like these have ruined many people's fitness ambitions. Thanks to the overwhelming amount of fitness pseudo-science and lies being pushed on us every day by bogus magazines and self-styled "gurus," it's becoming harder and harder to get in shape. Muscle Myths was written to debunk the most commonplace and harmful gimmicks, fads, myths, and misinformation in the health and fitness industry. And unlike other books that just offer endless opinions, the advice in this book is backed up by over 300 citations of scientific literature, and real-world results. Make no mistake: this isn't a book about exercise and diet theory. This book is full of practical, results-driven advice that will help you reach your fitness goals easier and faster. Here are just some of the things you'll learn in this book: Why you don't have to completely cut out carbs or fat, or eat weird combinations of food to lose weight. The truth about supplements and why 99% of them are a complete waste of money (and the few that are actually scientifically proven to work). The truth about the effects of fasting and the

"starvation mode" myth. Yup, it's a myth, and you may even want to incorporate some fasting into your meal schedule. Why eating a substantial amount of carbohydrates every day won't make you fat as some "experts" claim, but why going low-carb can be beneficial for some. The scientific secrets of getting a six-pack. Forget 6-minute gimmicks, doing endless crunches, and hours of grueling cardio--it's actually pretty easy when you know what you're doing. Training and diet methods that will completely shatter any perceived "genetic barriers" that you think are holding you back from building muscle or losing weight. What you need to know about alcohol and its effects on your fat loss and muscle growth. (Hint: It's not nearly as bad as some people claim, and you don't have to totally abstain if you know what you're doing!) And much more. This book will save you the money, time, and frustration of falling into the traps of misleading diets, workout programs, and products, and teach you how to finally start seeing real results with your diet and exercise. **SPECIAL BONUS FOR READERS!** With this book you'll also get a free 52-page bonus report from the author called "Muscle Meals: 15 Recipes for Building Muscle, Getting Lean, and Staying Healthy."
