From the Preface: This manual, Child Protective Services: A Guide for Caseworkers, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based-including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.

A Practitioner's Guide to Freshwater Biodiversity Conservation brings together knowledge and experience from conservation practitioners and experts around the world to help readers understand the global challenge of conserving biodiversity in freshwater ecosystems. More importantly, it offers specific strategies and suggestions for managers to use in establishing new conservation initiatives or improving the effectiveness of existing initiatives. The book: offers an understanding of fundamental issues by explaining how ecosystems are structured and how they support biodiversity; provides specific information and approaches for identifying areas most in need of protection; examines promising strategies that can help reduce biodiversity loss; and describes design considerations and methods for measuring success within an adaptive management framework. The book draws on experience and knowledge gained during a five-year project of The Nature Conservancy known as the Freshwater Initiative, which brought together a range of practitioners to create a learning laboratory for testing ideas, approaches, tools, strategies, and methods. For professionals involved with land or water management-including state and federal agency staff, scientists and researchers working with conservation organizations, students and faculty involved with freshwater issues or biodiversity conservation, and policymakers concerned with environmental issues-the book represents an important new source of information, ideas, and approaches.

Research has consistently shown that there is a link between caregiver substance use and child maltreatment, but less attention has been given to child trauma exposure. The co-occurrence of caregiver substance misuse and child trauma exposure is a prevailing problem that has

confounded social work prevention, protection, and treatment efforts with both children and adults for years. However, there has been minimal empirical and clinical literature focusing on child trauma as an outcome of caregiver substance use. This work is designed to be the catalyst for sustained intellectual inquiry about how caregiver substance use, child maltreatment, and violence exposure can be understood in theory and practice. To this end, the research presented in this book highlights the state of the science, the impact of the phenomenon, and the policy and practice questions that must be addressed. Implications for social work practice are highlighted in order to attenuate these deleterious and pervasive problems in the future. This book was originally published as a special issue of the Journal of Social Work Practice in the Addictions.

"Professionals working in child welfare and child protection are making decisions with crucial implications for children and families on a daily basis. The types of judgements and decisions they make vary and include decisions such as whether to substantiate a child abuse allegation, whether a child is at risk of significant harm by parents, and whether to remove a child from home or to reunify a child with parents after some time in care. These decisions are intended to help achieve the best interests of the child. Unfortunately, they can sometimes also doom children and families unnecessarily to many years of pain and suffering. Judgments and decisions in child welfare and protection are based to a large extent on the formidable knowledge base on child abuse and neglect created over the years to support this professional task chore. Nevertheless, making decisions in complex and uncertain environments is fraught with many difficulties and shortcomings. There are in fact many indications that decisions in this area are not reliable and there are many errors in judgment that could be avoided, had the decision makers relied on existing knowledge on decision making under uncertainty and followed appropriate procedures. Much needs to be improved on how these decisions are made by individual professionals and child welfare agencies"--
