Mary McMillan: The Mother of Physical ~ Mary McMillan was as instrumental in founding physical therapy, as Florence Nightingale influenced the profession of modern nursing. Mary knew from an early age that she was meant to help, heal, and assist those who were in pain. She was fearless and unafraid to help all who

suffered, no matter the peril. Mary was the key figure in organizing the profession of physical therapy in the first half of the twentieth century. Born in America in 1880, she was uprooted to England to live with her aunt at an early age. In college, she trained in physical education and remedial exercises in order to work with patients recovering from orthopedic surgery. In 1910 she worked in Liverpool under the eminent Sir Robert Jones. She returned to the United States in 1915 and became the Director of the Clinic of the Children's Hospital in Portland, Maine. Two years later, thousands of World War I wounded soldiers needed rehabilitation after the end of the war. She quickly became known and admired by leading orthopedic doctors and was recruited by the United States Surgeon General to form courses in physical reconstruction and therapy. Mary was the first reconstruction aide sworn into the United States Army in February 1918 and shortly thereafter was promoted to Director of Reconstruction Aides, later to be called Physical Therapists. World War I launched a need and ignited the field of physical therapy in America. It allowed women to begin a career in a new profession, one that would make their talents shine by healing tens of thousands of suffering soldiers. Mary taught the United States Army's inaugural class of over 200 women reconstruction aides at Reed College, whose graduates were sent out all over the country to set up hospital wards to rehabilitate the war's

wounded soldiers. She would become known by all in her profession as "The Mother of Physical Therapy," and a leader of the rapidly growing vocation. Because of Mary's hard work, efforts, and teaching, physical therapy would later become an integral part of every medical and physical recovery program for patients in homes, hospitals, clinics, schools, and training facilities around the world. In 1921, Mary wrote the best-selling book, *Massage and Therapeutic Exercise*, published by W.B. Saunders. She became the principal founder and president of the American Women's Physical Therapeutics Association, known today as the American Physical Therapy Association. At the same time, she was the Director of Physiotherapy at Harvard Medical School Graduate Program for eight years. In 1932, the Rockefeller Foundation appointed her to be the Chief Physiotherapist at Peiping Union Medical College (PUMC) in China until she resigned in 1941. Upon the completion of her nine-year tenure in China, she booked passage back to America the week before the Pearl Harbor attack, but was too late. She was left stranded in Manila as the Japanese invaded the city, which left no chance for her repatriation home. Mary, and over 4,000 other Americans, British, and Dutch faced tragic circumstances, heroic hardships, starvation, and life-threatening health issues during their imprisonment by the Japanese in the Santo Tomas and Chapei Internment Camps from 1941-1944.

Embodied Being is unique among books on manual therapy, offering an "infrastructure for intuition," a philosophical approach to what is essentially a practical process of diagnosis and treatment with one's hands. Grounded in the author's decades of practice as a Rolfer and Zen meditator, the book offers a first-of-its-kind three-step method for training practitioners how to see holistically, given the enormously important role perception plays in assessing clients. By exposing many of the unconscious

philosophical assumptions that occlude our understanding the depths of manual therapy, Embodied Being promises to illuminate the full scope of body-mind healing, from the point of view of both the practitioner and the person receiving the work. Embodied Being states the principles of intervention and shows practitioners how to use them to answer three fundamental questions common to all forms of therapy: What do I do first? What do I do next? and When am I finished? Perplexed that most practitioners are unable to answer these questions and simply rely on their intuition, Maitland sets out to define what makes a truly life-altering bodywork session, drawing on his understanding of Goethe, Merleau-Ponty, and other great thinkers. Maitland proposes that the holistic approach in bodywork is capable of creating new possibilities for the future by erasing the patterns that bind us to a dysfunctional past. Such sessions can so profoundly reshape the body that there is no longer any room for emotional torment--thus manual therapy can free bodies of physical pain, releasing the innate joy within the core of all human beings. Ultimately, giving and receiving manual therapy teaches both practitioners and clients how to move with grace, open their hearts, and touch the numinous.
