person to prepare illustration copy at a pre-professional level-copy that is, however, often usable for routine purposes-and/or to communicate better with graphics specialists who will prepare the final illustrations. The skills necessary to take the final step of producing finished camera-ready illustrations are, unfortunately, based very much on actual hands-on experience and are thus beyond the ability of this or any other book to instill satisfactory competence in. Illustrations should also prove to be a highly useful reference work for professional illustrators. The wide variety of training and work experiences by which they have acquired their skills may not have provided full acquaintance with all of the exceptionally diverse kinds of information to be found here. There are, moreover, few disciplines whose practitioners cannot profit from an invigorating refresher course. After nearly seven years of work, then, I am pleased to put forward a book with many answers pertaining to the proper selection and preparation of informational illustrations. All such questions and their actual solutions, however, must remain up to you, the inquiring and attentive reader.

An introduction to Thomas Hobbes as a systematic and not merely political philosopher. Best known for his contributions to political philosophy, Thomas Hobbes set out to develop a coherent philosophical system extending from logic and natural philosophy

to civil and religious philosophy. In this introduction to Hobbes's thought, Otfried Höffe begins by providing an overview of the entire scope of his work, making clear its systematic character through analysis of his natural philosophy, his individual and social anthropology, and his political thought. He then offers an innovative examination of religious and ecclesiastical questions, touching not only on the political implications of religion so important to Hobbes, but also on his attempt to reconstruct Christianity in terms of a materialistic philosophy. He also explores Hobbes's continuous critique of Aristotle and Aristotelian Scholastics, in which Höffe argues that Hobbes and Aristotle have much more in common philosophically than is normally supposed—and certainly more than Hobbes himself acknowledged. Finally, Höffe sketches the influence Hobbes had and continues to have on the development of legal and political philosophy. “A thoroughly successful introduction to the philosophy of Thomas Hobbes...” — Reinhard Brandt, in *Süddeutsche Zeitung*, in praise of the German edition

Ever since the serendipitous discovery of planet Uranus in 1871, astronomers have been hunting for new worlds in the outer regions of our solar system. This exciting and ongoing quest culminated recently in the discovery of hundreds of ice dwarfs in the Kuiper belt, robbed Pluto from its 'planet' status,

and led to a better understanding of the origin of the solar system. This timely book reads like a scientific ‘who done it’, going from the heights of discovery to the depths of disappointment in the hunt for ‘Planet X’. Based on many personal interviews with astronomers, the well-known science writer Govert Schilling introduces the heroes in the race to be the first in finding another world, bigger than Pluto.

Henry M. Beach was a prolific and accomplished upstate New York photographer who documented the North Country during the first quarter of the twentieth century. Although much less known and celebrated, Beach's work is as important to the twentieth-century Adirondacks as Seneca Ray Stoddard's is to the nineteenth century. Illustrated with over 250 examples of his work including ten panoramic foldouts, this book covers the range of Beach's subject matter. Robert Bogdan's lively and accessible approach to the photographer's work encourages the reader to explore the North Country's people and places through Beach's photography and life. Although Beach's postcard pictures and other photographs were taken to sell in bulk to hotel managers, tourist shop owners, and other retail merchants, they are not just mass-produced, stylized, pretty pictures. Beside the bubbling brooks and shady woodland paths are factory boomtowns and paper mills belching

pollution. As the rails brought increasing numbers of middle-class tourists to the Adirondacks, the wealthy created their own exclusive wilderness playground. Beach photographed dandy visitors at play as well as manual laborers sweating in the forest, logging camps, factories, mines, and construction sites. Images of "great camps" sit next to modest abodes, small stores, and family-owned resorts. Pictures of trains in scenic surroundings give way to mangled wrecks after tragic railroad accidents. In addition to standard view cards, he produced montages and advertisement postcardsserious visual commentary as well as lighthearted picture play. Beach's best works stir the heart and provoke the imagination, and his whimsical, down-to-earth approach to photography produced images that are a treat to the eye.

"This is a fascinating comparison of the histories of Ontario and Quebec as seen through the handling of their best-known heroines. Most Canadians are familiar with stories of Madeleine de Vercheres defending Montreal against the Iroquois in 1692 and of Laura Secord and her cow bravely crossing the American lines to warn the British during the War of 1812.

This book explores the nature of one of the most ancient tools for nonverbal communication: drawings. They are naturally adaptable enough to meet an incredibly wide range of communication needs. But how exactly do they do their job so well? Avoiding the kinds of aesthetic rankings of different graphic domains so often made by art historians and critics, Manfredo Massironi considers an extensive and

representative sample of graphic applications with an open mind. He finds a deep mutuality between the material components of images and the activation of the perceptual and cognitive processes that create and decipher them. Massironi first examines the material components themselves: the mark or line, the plane of representation (the angle formed by the actual drawing surface and the depicted objects), and the position of the viewpoint relative to the depicted objects. The roles played by these three components are independent of the content of the drawing; they function in the same way in concrete and abstract representations. He then closely scrutinizes the choices made by the person planning and executing the drawings. Given that any object can be depicted in an infinite number of different ways, the drawer performs continuous work emphasizing and excluding different features. The choices are typically unconscious and guided by his or her communicative goals. A successful graph, be it simple or complex, is always successful precisely because the emphasized features are far fewer in number than the excluded ones. Finally, he analyzes the perceptual and cognitive integrations made by the viewer. Drawings are not simply tools for communication but important instruments for investigating reality and its structure. Richly illustrated, the book includes a series of graphic exercises that enable readers to get a sense of their own perceptual and cognitive activity when inspecting images. Massironi's pathbreaking taxonomy of graphic productions will illuminate all the processes involved in producing and understanding graphic images for a wide audience, in fields ranging from perceptual and cognitive psychology through human factors and graphic design to architecture and art history.

Are images an important means of recalling information from memory and solving problems? Or are images just display

lights on the mind's computer? In *Image and Mind*, Stephen Kosslyn makes an impressive case for the view that images are critically involved in the life of the mind. In a series of ingenious experiments, he provides hard evidence that people can construct elaborate mental images, search them for specific information, and perform such other internal operations as mental rotation. Kosslyn demonstrates that these results are best explained by a two-tiered model in which images are stored in abstract form in long-term memory and then assembled for internal display in much the way that images on a TV screen can be created from files in a computer memory. Kosslyn shows how this model can be used to solve many of the persistent questions which have traditionally plagued theories of imagery that attempted to install imagery as the exclusive medium of mental representation. Unlike any other work on imagery, *Image and Mind* provides an integrated account of most of the modern empirical results from imagery research within the framework of a coherent theory. The book also introduces a host of new experimental techniques and major hypotheses to guide future research. The result is a landmark book and a major event in the study of the mind.

There are entirely new sections on immigration, acculturation, and friendships in multicultural settings; disruptive behaviour and oppositional defiant disorder; sexting; and adolescent bedtimes. The Adolescence chapter has been extensively revised, covering work on the social brain, insights from neuroscience, evolutionary perspectives on risk-taking and peer relationships, romantic development, and use of mobile phones and the internet. This collection of case studies investigates the significance and function of national identity. The authors see national consciousness in terms of the circumstances in which it arose, and in terms of the meaning which it had for a specific group or individual. Representations of the nation could serve to legitimize or support specific political or social agendas, or to provide people with a point of fixity amidst changing circumstances. The articles in this volume trace these aspects of national consciousness in the case of a single country: The Netherlands.

Mobility and Migration in Film and Moving Image Art explores cinematic and artistic representations of migration and mobility in Europe from the 1990s to today. Drawing on theories of migrant and diasporic cinema, moving-image art, and mobility studies, Bayraktar provides historically situated close readings of films, videos, and cinematic installations that concern migratory networks and infrastructures across Europe, the Middle East, and Africa. Probing the notion of Europe as a coherent entity and a borderless space, this interdisciplinary study investigates the ways in which European ideals of mobility and fluidity are deeply enmeshed with forced migration, illegalization, and xenophobia. With a specific focus on distinct forms of mobility such as labor migration, postcolonial migration, tourism, and refugee mobilities, Bayraktar studies the new counter-hegemonic imaginations invoked by the work of filmmakers such as Ayşe Polat, Fatih Akin, Michael Haneke, and Tony Gatlif as well as video essays and installations of artists such as Kutluğ Ataman, Ursula Biemann, Ergin Çavuşoğlu, Maria Iorio and Raphaël Cuomo. Challenging aesthetic as well as national, cultural, and political boundaries, the works central to
