A DARK PARANORMAL MYSTERY SERIES - BOOK 2 IN THE VISCOUNT'S SON TRILOGY (VAMPIRE FICTION) Michael D'Angelo doesn't normally investigate murder, but since they never found Emma's body, she's technically just a missing person. But he doesn't investigate those either. After the Earl of Wolston reads the translation of a sinister and ancient text published on his daughter's blog, in the days leading up to her disappearance, he reaches out to Mr D'Angelo, convinced that evil forces are at work: something beyond the ordinary, something not of this world, something unholy. Fortunately for Michael, Paranormal Investigations are his specialty. But as Michael unravels Emma's last days, and the secrets inscribed on her blog, he begins to question whether such knowledge is too dangerous to pursue.

As today's spark-ignition and diesel engines have to fulfil constantly increasing demands with regard to CO2 reduction, emissions, weight and lifetime, detailed knowledge of the components of an internal combustion engine is absolutely essential. Automotive engineers can no longer survive without such expertise, regardless of whether they are involved in design, development, testing or maintenance. This text book provides answers to questions relating to the design, production and machining of cylinder components in a comprehensive technical analysis.

Killer Sudoku (also called "Sums Sudoku", "Sums Number Place", "Samunamupure", "Kikagaku Nampure") is a puzzle that combines elements of Sudoku and Kakuro. Despite the name, the simpler killer sudokus can be easier to solve than regular sudokus, depending on the solver's skill at mental arithmetic, the hardest ones, however, can take hours to crack. In Killer Sudoku, sub-regions have specified sums, and no number can be repeated within a region.

Demonstrating the role of nuclear medicine as a complementary technique to mammography and other imaging modalities for the diagnosis of breast cancer, Radionuclide Imaging of the Breast provides a comprehensive overview of scintimammography-an accurate, safe, and noninvasive imaging method for the evaluation of breast lesions and malignancies. Reveals the encouraging results of multicenter clinical trials in the U.S. and Canada using 99mTc sestamibi breast imaging for the diagnosis of primary breast carcinoma! Addressing nonsurgical sampling of nonpalpable breast lesions as an effective means of providing diagnostic and prognostic information, Radionuclide Imaging of the Breast discusses increasing the diagnostic value of mammography and its widespread use examines the reliability of FDG-PET and FDG-SPECT in detecting lymph node involvement and distant metastases reviews breast cancer imaging with monoclonal antibodies, including murine and bioengineered antibodies compares the benefits and limitations of Thallium-201 to 99mTc-sestamibi breast imaging in evaluating suspected malignancy assesses the clinical impact of scintimammography as an adjunctive test to mammography to improve the dependability of diagnoses considers the possibility of replacing axillary lymph node dissection in patients with small breast cancers with the

sentinel node approach clarifies the importance of surgery in the multimodality treatment of breast cancer elucidates pathologic difficulties for breast cancer diagnosis and more! Radionuclide Imaging of the Breast serves as an essential reference for nuclear medicine physicians, radiologists, breast surgeons, medical and surgical oncologists, gynecologists, pathologists, internists, and primary care physicians.

This book is the first to focus on violent and/or 'abusive' behaviours in lesbian, gay, bisexual and/or transgender, non-binary gender or genderqueer people's intimate relationships. It provides fresh empirical data from a comprehensive mixed-methods study and novel theoretical insights to destabilise and queer existing narratives about intimate partner violence and abuse (IPVA). Key to the analysis, the book argues, is the extent to which Michael Johnson's landmark typology of IPVA can be used to make sense of the survey data and accounts of 'abusive' behaviours given by LGB and/or T+ participants. As well as calling for IPVA scholars to challenge heteronormativity and cisnormativity and improve IPVA measurement, this book offers guidance and a new tool to assist practitioners from a variety of relationships services with identifying victims/survivors and perpetrators in LGB and/or T+ people's relationships. It will appeal to academics and practitioners in the field of domestic violence and abuse.?

The theory of transmission lines is a classical topic of electrical engineering. Recently this topic has received renewed attention and has been a focus of considerable research. This is because the transmission line theory has found new and important applications in the area of high-speed VLSI interconnects, while it has retained its significance in the area of power transmission. In many applications, transmission lines are connected to nonlinear circuits. For instance, interconnects of high-speed VLSI chips can be modelled as transmission lines loaded with nonlinear elements. These nonlinearities may lead to many new effects such as instability, chaos, generation of higher order harmonics, etc. The mathematical models of transmission lines with nonlinear loads consist of the linear partial differential equations describing the current and voltage dynamics along the lines together with the nonlinear boundary conditions imposed by the nonlinear loads connected to the lines. These nonlinear boundary conditions make the mathematical treatment very difficult. For this reason, the analysis of transmission lines with nonlinear loads has not been addressed adequately in the existing literature. The unique and distinct feature of the proposed book is that it will present systematic, comprehensive, and in-depth analysis of transmission lines with nonlinear loads. A unified approach for the analysis of networks composed of distributed and lumped circuits A simple, concise and completely general way to present the wave propagation on transmission lines, including a thorough study of the line equations in characteristic form Frequency and time domain multiport representations of any linear transmission line A detailed analysis of the influence on the line characterization of the frequency and space dependence of the line parameters A rigorous study of the properties of the analytical and numerical solutions of the network equations The associated discrete circuits and the associated resistive circuits of transmission lines Periodic solutions, bifurcations and chaos in transmission lines connected to nonlinear lumped circuits

Spon's Quarry Guide provides complete and up-to-date information on all of Britain's hard rock quarrying industry. How Cool Are Penguins is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart. This collection examines education in the light of a politics of becoming. It takes a non-hierarchical transdisciplinary approach, challenging the macropolitics of pre-established governmental and economic agendas for education. Drawing on the philosophy of Gilles Deleuze and Felix Guattari, the contributors consider questions such as how education might engage a politics of becoming, and how education and becoming function in a society of control. Since Deleuze and Guattari contend that a society is defined by its becomings, its transformations, this collection asks how education, itself a process in becoming, may contribute "collective creations" to a society in continual flux. The chapters bring theory and praxis together, deploying power, affect, cartography, space, relationality, assemblage and multiple literacies in order to experiment with music, art, language, teacher education, curriculum and policy studies. This collection is an innovative resource, creating an encounter with the macropolitics of education, and altering teaching, learning, evaluation and curriculum. This book was originally published as a special issue of Discourse: Studies in the Cultural Politics of Education.

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.
