Several well-documented chapters are dedicated to long-term care, inpatient hospital reimbursement, hospice care, and end-stage renal disease. Part II, deals with Medicaid. In addition to inpatient hospital reimbursement and long-term care, there is an informative expose of abortion and family planning services, to include U.S. Supreme Court cases, legislative restrictions, regulations, and litigation. Patient care documentation created by the rehabilitation professional must be accurate, comprehensive, concise, objective, and timely. This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect

uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Published in 1998, this work is concerned, in the main, with reproduction - for which marriage is not an essential prerequisite. Nevertheless, much of sexuality and the greater part of parenthood still subsist within the marital relationship. Sex and marriage are interdependent - indeed the definition of the latter depends on the former. After looking at the prerequisites for marriage and for making a marriage void, the author shows that the medico-legal interests of marriage relate to the mental health and the sex of the parties. The author also looks at various aspects of the sexual-familial relationship, including contraception, sterilization, abortion, protection of the foetus, foetal experimentation, the infertile husband, the infertile woman, defective neonates and infants, consent to treatment and research in children, the protection of young children and the killing of children

When the end of life makes its inevitable appearance, people should be able to expect reliable, humane, and effective caregiving. Yet too many dying people suffer unnecessarily. While an "overtreated" dying is feared, untreated pain or emotional abandonment are equally frightening. *Approaching Death* reflects a wide-ranging effort to understand what we know about care at the end of life, what we have yet to learn, and what we know but do not adequately apply. It seeks to build understanding of what constitutes good care for the dying and offers recommendations to decisionmakers that address specific barriers to achieving good care. This volume offers a profile of when, where, and how Americans die. It examines the dimensions of caring at the end of life: Determining diagnosis and prognosis and communicating these to patient and family. Establishing clinical and personal goals. Matching physical, psychological, spiritual, and practical care strategies to the patient's values and circumstances. *Approaching Death* considers the dying experience in hospitals, nursing homes, and other settings and the role of interdisciplinary teams and managed care. It offers perspectives on quality measurement and improvement, the role of practice guidelines, cost concerns, and legal issues such as assisted suicide. The book proposes how health professionals can become better prepared to care well for those who are dying and to understand that these are not patients for whom "nothing can be done."

"Over the past twenty years there has been a shift in medical law and practise to increasingly distrust the judgement of health professionals. An increasing number of codes of conduct, disciplinary bodies, ethics committees and bureaucratic policies now prescribe how health professional and health researchers should act and relate to their patients. The result of this, Mark Henaghan argues, has been to undermine trust and professional judgement in health professionals, while simultaneously failing to trust the patient to make decisions about their care. This book will look at the issue of health professionals and trust comparatively in a number of countries including the USA, Canada, Australia, New Zealand and the UK. The book will show by historical analysis of legislation, case law, disciplinary proceedings reports, articles in medical and law journals and protocols produced by management teams in hospitals, how the shift from trust to lack of trust has happened. Drawing comparisons between situations where trust is respected such as in emergency situations, and where it is not for example routine decisions such as obtaining consent for an anaesthetic procedure, the book shows how this erosion of trust has the potential to dehumanise the special nature of the relationship between healthcare professionals and patients. The effect of this is that the practice of health care is turned into a mechanistic enterprise controlled by "management processes" rather than governed by trust and individual care and judgement. This book will be an invaluable resource for students and scholars of medical law and medical sociology, public policy-makers and a range of associated professionals, from health service managers to medical science and clinical researchers"--Provided by publisher.

Numerous important issues arise in relation to the health of, and healthcare for (and by), migrants. Much commentary on the migrant crisis and healthcare has focused on the allocation of resources, with less discussion of the needs of, and provision for, migrants. Presenting a comparative perspective on the UK and Germany, this volume increases knowledge of a broad spectrum of challenges in healthcare provision for migrants. 'Migration' is deliberately understood in its broadest sense and includes not only migrant patients but also migrant healthcare professionals. The book's content is diverse, with insights from healthcare ethics, healthcare law, along with clinical perspectives as well as perspectives from the social sciences. The collection provides normative reflections on current issues, and presents data from empirical studies. By informing researchers, politicians and healthcare practitioners about approaches to challenges arising in healthcare provision for migrants, the collection seeks to inform the development of adequate and ethically appropriate strategies.
