In this volume, authors draw from theoretical and methodological frameworks in the health, social and behavioral sciences to illustrate how poor outcomes among individuals and communities can be linked to the interplay of multiple factors operating at various levels.

K.I.S.S.: Keep Individual Security Simple by Chuck Helmke and Charlotte Guttenberg is a primer for individual security (self-defense). Although K.I.S.S. offers advice and tips useful to any age group or gender, the writers are particularly interested in the concerns of senior citizens and people with disabilities, people who may think they cannot defend themselves. They do this utilizing a fictitious group of senior citizens and the problems they encounter with a gang that is victimizing them. The writers are senior citizens who recognize issues that can easily be overlooked in other training courses by trainers who have yet to experience the tolls of age. Helmke says, I have tried to address problems in a down-to-earth manner that is readily understandable, regardless of the present training level of students. There is no one-size-fits-all answer to this type of training. Statistically, the safest defensive solutions are avoidance, deterrence and de-escalation. They have proven to be absolutely the safest way to live your life. However, these three solutions can fail because of something we did not do or because of something totally out of our control. If avoidance, deterrence and de-escalation have failed to defuse a volatile or violent situation and a life-threatening situation is imminent, I have problems with the idea of hand-to-hand combat for most people. The only true equalizer for these types of potentially life-threatening situations, in my humble opinion, is a handgun. That is my defensive choice. For whatever reasons, if you feel that is not your choice, then I will do my best to address some possible alternatives you may choose to use. That said, I feel the handgun is the best possible defensive weapon for anyone, especially women, senior citizens and people with disabilities. It might prepare you for the day I hope never comes. In the words of some experts in the world of defense who have read K.I.S.S.: Keep Individual Security Simple: Brent Shepherd, Director of Operations at the American Police Hall of Fame Shooting Center says of K.I.S.S.: This is the most straightforward explanation of applied personal safety principles I have ever read. The concepts and practical applications are easy to follow and this book provides insights that can benefit everyone. Retired Philadelphia policeman, Steven O. Forester says: This book offers you the opportunity to learn how to be a survivor of the worst thing that could happen to you, the loss of your life or that of your loved ones. The world is changing and not always for the good. Dont let the bad guys win. Give yourself the edge to come out of that situation a winner. Remember, age is just a number, if you prepare your mind and body to do the task, it can be done. Retired deputy sheriff, C.J. Gibson says: After Mary became a victim of a purse snatching, Arthur and Louise, along with their neighbors decided not to be victims any longer and took some personal initiative to prepare themselves for individual security. In a society plagued with increasing violence, Helmke and Guttenberg provide an easy, fun read and practical advice for anyone interested in taking responsibility for their personal security. They deliver this advice utilizing an elderly couple with physical challenges and limitations often faced by our aging population. Helmke and Guttenberg are passionate and knowledgeable in the task of personal safety. They provide sound, real life, practical concepts to begin your quest of individual security. Special Agent Jeffrey Stover, Retired U.S. Secret Service says: If you decide to kill a fly -- you kill it with a sledgehammer you know how a fly can be such a pest -- you move your hand to make it move away or try to swat it with your hand -- but cant quite get it. You may move to attempt to catch it and se

This collection of essays revisits Jacques Maritain's book, Man and the State--the University of Chicago Walgreen lectures of 1949--and critically engages its greatest themes and arguments: the character of the modern state and its relation to the body politic, the state's functions and claims, the basis of authority, the foundation of human rights and natural law, structural pluralism, Church and State relations, national sovereignty, and the prospects for world government. The contributors address whether Maritain has successfully accomplished his project of engaging modernity from the perspective of a 20th century disciple of Thomas Aquinas; whether his reformulations and revisions of the modern state are philosophically sound and prudent; and whether his developments of Aristotle and Aquinas are faithful to the sources. Maritain, drawing upon the philosophy of Aquinas, represents a significant achievement: he provides a viable reassessment of the liberal state, uniting Thomistic and Aristotelian traditions with the human rights thrust of modern political philosophy. In short, Maritain reassesses the liberal state in light of ancient and medieval political traditions, seeking to find what is true, enduring, and practical in the modern liberal state, while criticizing its excesses and reconceptualizing its philosophical foundations. The contributors to this collection find Maritain has achieved much in the accomplishment of this project. Some continue this project by applying Maritain's philosophy to contemporary issues. Other contributors find it helpful, however, to compare Maritain to other contemporary political philosophers, and to question his use of the philosophy of Aquinas. Maritain's political philosophy, and Man and the State in particular, is worth continued study. Although his influence was greatest in the 1950s and 1960s and his philosophy has been displaced by new trends, his work shows a remarkable resilience and relevance to the issues of the day, offering a deeper philosophical foundation and more flexible set of tools for analysis than currently provided. Timothy Fuller, professor of political science and acting president of Colorado College, is the editor of Leading and Leadership and The Voice of Liberal Learning: Michael Oakeshott on Education. John P. Hittinger is professor of philosophy at the United States Air Force Academy and coeditor of Liberalism at the Crossroads: An Introduction to Contemporary Liberal Theory and its Critics. Contributors: J. Budziszewski, Joseph M. DeTorre, Gregory Doolan, Desmond FitzGerald, Timothy Fuller, John R. Goodreau, Catherine Green, William Haggerty, James G. Hanink, Jeanne M. Heffernan, John P. Hittinger, Russell Hittinger, Richard Lemp, V. Bradley Lewis, Nicholas C. Lund-Molfese, John G. Trapani, Jr., Deborah Wallace, Henk E. S. Woldring, and Michael Woodward

20 essays drawn from numerous online archives that illuminate two decades' progress of DeVoon's thought on the philosophy of laissez faire law, a system that he believes has no direct

antecedents, except Thomas Paine and Ayn Rand O'Connor, with a grateful hat tip to Jefferson, Lincoln, Madison, Hancock, Otis, and Franklin.

The Psychology of Police Deadly Force Encounters: Science, Practice, and Police is a fascinating look into the reality of police work. The author integrates noted theories into a "street-wise" understanding of being a police officer. The focus of this book is on the use of deadly force by officers—a topic of considerable importance. The author discusses the psychosocial aspects of deadly force use, stemming from the individual officer, the situation, organizational influences, and the police culture. Expanding further into social issues, the controversial topic of race and use of deadly force is discussed. This depiction looks at both sides—that of racial victimization and that of the police—which helps to provide a rather unique perspective on this important issue. Of interest, the author breaks down the different dimensions of cognition as a factor in decision making among police, including the perception of the situation, the action taken depending on that perception, and the role of present and past memory. This will make for a useful training topic to alert officers to the cognitive processes that go into deadly force use—processes that they have the control to change to make a better decision. Next, the book delves into the biological factors that may be involved in police decision making—again where deadly force is involved. The various negative psychological impacts that a deadly force situation may bring about are identified and explained. This book will be useful as a tool for both law enforcement practitioners and researchers to better understand the intricacies of deadly force by the police. For researchers, the book has a multitude of references available for further exploration. It will prove to be a useful guide and reference volume for police managers and supervisors, mental health clinicians, investigators, attorneys, judges, law enforcement educators and trainers, rank and file police officers, including expert witnesses.

In doing so, they consider possibilities for the new life -- a life that may be cut short in a final confrontation that involves Cassie, Charlie, and Sam in a terrible recreation of a past tragedy. Can Sam and Cassie emerge unscathed or will it be the end of their relationship...and their lives?

International law and conventional morality take it for granted that states may stand ready to defend their borders with lethal force. But what grounds the permission to kill for the sake of political sovereignty and territorial integrity? Especially since warfare always unavoidably involves killing the innocent? Can rights of national defence be grounded in individual interests alone? Or is there something special about the state, which makes it worth killing to defend? This book brings together the leading contemporary theorists of the morality of war, to address these vexed questions in new, ground-breaking essays, which will set the terms of the debate over national defence for years to come.

The phenomena of closed head injury have plagued our society since its inception. From the stress and horror of our wars (now Iran and Iraq), with the violent impacts in our most aggressive sports, to the mundane trauma of falling off a bike or getting hit in the head by a swing or a bat or a ball, the effects of Traumatic Brain Injury (TBI) have become such an accepted way of life, that many do not even know that they have suffered a closed head injury and how dramatically it influences their everyday actions and reactions. Its often frequent companion, Post Traumatic Stress Disorder (PTSD), is now so recognized that public violence and catastrophic natural disasters demand psychologists to minimize the effects of this recognized condition. For twenty-seven years, the author has had to fight his horrible battle with TBI and PTSD alone, with little help from even the most informed. In the last five years, these maladies have become widely recognized. Only recently has the medical profession and the news media discussed TBI and PTSD openly in televised documentaries. The author, in a deeply personal and poignant way, has put into words the gamut of feelings, which so many others who suffer and deal with TBI and PTSD have been unable to articulate.

When we take a look back at the way Western states have fought terrorist organizations in the last 20 years, it is difficult not to think that these alternatives to war might have been more ethical than the decisions to invade Afghanistan and Iraq in 2001 and in 2003. These cases speak for themselves as they have both led to the death of hundreds of thousands of innocent civilians, which is highly paradoxical in light of the logic that supported these interventions. There is a need to think of alternatives to war that will imply the legitimization of proactive sets of measures that would allow states to effectively prevent terrorist attacks through the use of kinetic force in a limited extent as a way to avoid the terrible and unpredictable effects of wars. Violent Alternatives to War: Justifying Actions Against Contemporary Terrorism engages in a moral discussion of the challenges associated with violent alternatives to war when confronting terrorism and suggests a comprehensive approach to how this form of violence can be legitimized and how it ought to be used against this contemporary threat.

In Stoning the Keepers at the Gate, police psychologist Lawrence N. Blum, Ph.D. looks at the role of law enforcement in modern times and argues that, while bad cops need to be rooted out, blanket condemnation of the police threatens the very liberties that make such condemnation possible, as well as the safety of the American public in their homes and lives. Blum argues that the enormous stresses officers experience--from violent physical attack to unrewarded or misunderstood acts of heroism--require special understanding, an understanding that is often missing from police departments themselves. Blum provides a unique insight into the dynamics, practices, and activities within police agencies that influence police officers' actions, and that often hide the real sources of police behaviors that are thought of as faulty, insensitive, or inappropriate. A passionate call not only for understanding but a reappraisal of whose actions are scrutinized within and outside of police agencies, police accountability, and the nature of policing itself in the twenty-first century. Stoning the Keepers at the Gate is a dynamic and fascinating analysis of the role of law enforcement today.

My purpose and hope in writing this book about Handguns, Concealed Carry, and Legal Concerns is to impart to you knowledge to save you money. An even more important goal is to save you potential heartache; and most critical, to encourage you to protect your life and that of your loved ones. "Why and how," you ask? First, The Need: The FBI reported, "In 2010 there was a burglary every 15 seconds." One in five women in a recent survey stated they had been a victim of sexual assault. When resisting a criminal assault, an armed woman has a 400% better chance of escaping unharmed than an unarmed woman. Question: What's your plan? Just trust in Blind Luck? The Why: To purchase an inappropriate handgun or two can cost hundreds of dollars. To run afoul of the law- that expense begins in the thousands of dollars. To be unarmed and unprepared to confront a violent attacker-that cost is incalculable. Remember: "Lightning and violence have one thing in common-they both strike somewhere." The How: There is no other single source, one volume book covering handguns, ammunition, holsters, maintenance, safes, safety, legal concerns, and miscreant misbehavior. This book is an effort to fill that void. If you are not certain that you need to know more, open the book to page IX and take a quick assessment of your knowledge. Thank you for giving me a look, and don't forget: "You make your choice and you take your chances."

Can the medical examiner really glean all the information from a dead body that's portrayed on forensic television shows? In this book, Dr. Cumberland gives the reader a look into the life of a real working medical examiner and the types of death cases that routinely come through his morgue. The author uses actual cases from the hundreds of autopsies he has performed in Mobile, AL, and Pensacola, FL, to explain basic principles and procedures used in death investigation in a way that is both entertaining and educational. For nearly fifteen years Practical Decision Making in Health Care Ethics has offered scholars and students a highly accessible and teachable alternative to the dominant principle-based theories in the field. Devettere's approach is not based on an ethics of abstract obligations and duties, but, following Aristotle, on how to live a fulfilled and happy life—in short, an ethics of personal well-being grounded in prudence, the virtue of ethical decision making. This third edition is revised and updated and includes discussions of several landmark cases, including the tragic stories of Terri Schiavo and Jesse Gelsinger (the first death caused by genetic research). Devettere addresses new topics such as partial-birth abortion law, embryonic stem cell research, infant euthanasia in The Netherlands, recent Vatican statements on feeding tubes, organ donation after cardiac death, new developments in artificial hearts, clinical trials developed by pharmaceutical companies to market new drugs, ghostwritten scientific articles published in major medical journals, and controversial HIV/AIDS research in Africa. This edition also includes a new chapter on the latest social and political issues in American health care. Devettere's engaging text relies on commonsense moral concepts and avoids academic jargon. It includes a glossary of legal, medical, and ethical terms; an index of cases; and thoroughly updated bibliographic essays at the end of each chapter that offer resources for further reading. It is a true classic, brilliantly conceived and executed, and is now even more valuable to undergraduates and graduate students, medical students, health care professionals, hospital ethics committees and institutional review boards, and general readers interested in philosophy, medicine, and the rapidly changing field of health care ethics.

The controversy surrounding targeted killings represents a crisis of conscience for policymakers, lawyers and philosophers grappling with the moral and legal limits of the war on terror. This text examines the legal and philosophical issues raised by government efforts to target suspected terrorists.

Like the other men in Prince Kelvin's line, only the love of another can free him from his family's curse, but it's hard finding the perfect woman able to love him despite all his flaws—and his tendency to

transform into an animal during the spring. To survive and reclaim his humanity, he must find someone who would turn the world upside down for him, not because of fame, wealth, or power, but because he has earned her trust and love. When he develops an unhealthy case of infatuation for the huntress wanting him as her next trophy, his curse may be his salvation, if he can convince the wild woman of the woods to see him for who he is rather than the beast he has become.

Red Rising and Philosophy has gathered together a crew of the wisest Helldivers philosophy can offer. Could humanity's love of physical enhancements cause its extinction? Do people doom humanity by trying to all be the same? Can a person love someone, while at the same time wanting that person destroyed? Is equality always the best principle on which to organize society? What is evil, and how does it exist in contemporary life? Does one remain the same person, even after changing every physical aspect of one's body? Is it moral to sell oneself into slavery, whether it's through sex or manual labor? Is it ethical to sell one's children into slavery, on the promise that their children will live in peace and tranquility? These questions and more are what make Brown's Red Rising trilogy such an impactful story. Brown pulls no punches, and philosophy works best in such an environment. Red Rising and Philosophy is not for the timid or the faint at heart. It's not The Passage, since no one will die from reading it, but reading it could be a life-changing experience.

This edited collection of data and perspectives takes a fresh approach to gun violence prevention by addressing the question, "why are we losing the war on gun violence in America?" Although successes and failures in the prevention of gun violence are examined, it is a war we are losing, due to restrictions on research funding, entrenched historical perspectives, structural violence, and perhaps differing priorities or views on what is right or wrong. Gun violence is a public health crisis. It remains politicized and has been paralyzed with inaction. In the chapters, the authors write candidly about the challenges that have thwarted gun violence prevention, as well as highlight possible strategies for progress to save lives. With this compendium, the editors and authors hope to bridge the growing gap between groups or ideologies, and create common ground to discuss workable solutions. Why We Are Losing the War on Gun Violence in the United States is essential reading for a broad audience including practitioners, academics, researchers, students, policy-makers, and other professionals in public health, behavioral sciences (including social work and psychology), social sciences, health sciences, public policy, political science, and law, as well as any readers interested in the path to decreasing gun violence in America.
