Cryptography and encrypted protocols lay a foundation for discussion of specific Linux security tools, including PAM, sudo, and GPG. User, file, and network security are covered. The network security discussion includes firewalls, VPNs, and utilities such as nmap, ethereal, and the SAINT profiling tool. Throughout, the book provides examples of sample commands and output, plus screen shots of related graphical utilities.

Alan Ward, PhD, holds an M Sc in Computer Engineering from the University of Andorra and an MA in Taxation from the Universitat Oberta de Catalunya. He has taught Computer Science, Mathematics and Engineering at the Batxillerat center of Escola Andorrana (Andorra) since year 1995. He has previously taught various aspects of Computer Science both at the University of Andorra and Universitat Oberta de Catalunya. He has been using various distributions of the GNU/Linux operating system as his main computing platform since 2000, beginning with Slackware. For the last decade, Linux Mint has been his environment of choice. This book is intended a guide for people who are already users of computers, and who would like to install a modern GNU/Linux distribution. In successive steps, users are accompanied through: 1. Setting up a base system. 2. Maintaining software and upgrading. 3. Installing extra software. 4. Making backups of data. 5. Firewalls and system protection. Care has been taken to treat users with a non-technical background as adults worthy of respect, trying both not to seem patronizing and not to use an artificially simplistic language. On the contrary, when instructions are given, they come with comprehensive explanations as to what they do and why they are needed. The "monkey see, monkey do" paradigm often seen on the Internet is not to the liking of the author, and has thus been avoided.

Note: This is a republication of IBM Spectrum Archive Enterprise Edition V1.2.6: Installation and Configuration Guide with new book number SG24-8445 to keep the content available on the Internet along with the recent publication IBM Spectrum Archive Enterprise Edition V1.3.0: Installation and Configuration Guide, SG24-8333. This IBM® Redbooks® publication helps you with the planning, installation, and configuration of the new IBM SpectrumTM Archive V1.2.6 for the IBM TS3310, IBM TS3500, IBM TS4300, and IBM TS4500 tape libraries. IBM Spectrum ArchiveTM EE enables the use of the LTFS for the policy management of tape as a storage tier in an IBM Spectrum ScaleTM based environment. It helps encourage the use of tape as a critical tier in the storage environment. This is the sixth edition of IBM Spectrum Archive Installation and Configuration Guide. IBM Spectrum Archive EE can run any application that is designed for disk files on a physical tape media. IBM Spectrum Archive EE supports the IBM Linear Tape-Open (LTO) Ultrium 8, 7, 6, and 5 tape drives in IBM TS3310, TS3500, TS4300, and TS4500 tape libraries. In addition, IBM TS1155, TS1150, and TS1140 tape drives are supported in TS3500 and TS4500 tape library configurations. IBM Spectrum Archive EE can play a major role in reducing the cost of storage for data that does not need the access performance of primary disk. The use of IBM Spectrum Archive EE to replace disks with physical tape in tier 2 and tier 3 storage can improve data access over other storage solutions because it improves efficiency and streamlines management for files on tape. IBM Spectrum Archive EE simplifies the use of tape by making it transparent to the user and manageable by the administrator under a single infrastructure. This publication is intended for anyone who wants to understand more about IBM Spectrum Archive EE planning and implementation. This book is suitable for IBM clients, IBM Business Partners, IBM specialist sales representatives, and technical specialists.
