Do you want a holiday that bypasses too familiar haunts and gives you a greater depth of experience? Do you want a holiday that is enriching for you - and for the locals at your destination? If you do, and believe that your trip should give local communities a fair deal (so often denied them) as well as being fun, then this book is for you. This fully revised second edition of *The Ethical Travel Guide* is the essential resource for responsible global travel, providing a wealth of new ideas for your next holiday. The extensive directory has been updated and expanded, listing hundreds of places to visit and stay in countries all over the world. From sustainable farming in Ecuador to luxury culinary breaks in Crete, there is something for every taste and budget. A thorough introduction gives a background to the many ethical and practical issues involved, including a new section on travel and climate change. Combining thoughtful guidance with comprehensive listings, this is the essential guide for anyone interested in ethical, fair and sustainable tourism. This volume covers seventy-eight species with concise life history accounts revealing a surprising wealth and variety of both rodents and bats, which are able to exploit Pakistan's varied climate and topography. This field guide describes the special adaptations which have enabled some species to live and reproduce in the harshest of hot desert environments, as well as frigid alpine regions. The fluctuating cycles of population abundance, then scarcity, of some small mammals is revealed in the accounts of their reproductive biology. The grain storing habits of some rodents reveals the detrimental impact on man and his food crops. The beneficial effects both from fruit pollination and seed dispersal of valuable trees by some bats are also discussed. Nearly every species is illustrated either with photographs, or by pen and ink drawings by the author. It is hoped that this field guide will help to create more interest and awareness of these tiny animals which live among us, yet remain largely unnoticed.

*Wildlife Management and Conservation* presents a clear overview of the management and conservation of animals, their habitats, and how people influence both. The relationship among these three components of wildlife management is explained in chapters written by leading experts and is designed to prepare wildlife students for careers in which they will be charged with maintaining healthy animal populations; finding ways to restore depleted populations while reducing overabundant, introduced, or pest species; and managing relationships among various human stakeholders. Topics covered in this book include • The definitions of wildlife and management • Human dimensions of wildlife management • Animal behavior • Predator–prey relationships • Structured decision making • Issues of scale in wildlife management • Wildlife health • Historical context of wildlife management and conservation • Hunting and trapping • Nongame species • Nutrition ecology • Water management • Climate change • Conservation planning

Sri Lanka has one of the highest species densities in the world including a number of endemic plants and animals. Unusually for a moderately sized island it also has large mammals. It is one of the best places in the world for seeing and photographing Blue Whales, Sperm Whales, Leopards, Asian Elephants and Sloth Bears, dubbed Sri Lanka's Big Five. It also has the largest annually recurring Gathering of wild elephants of anywhere in the world; a truly spectacular event. This book brings together all of Sri Lanka's top wildlife stories, many of which have come to light only in the last few years. Further chapters detail wildlife watching opportunities for primates, birds, reptiles, turtles, butterflies and dragonflies; a description of the parks and reserves by habitat type; and a wildlife watching calendar to help plan a trip. Throughout the book there are extracts from *A Naturalist's Journal*, which in the form of a first person commentary take readers to specific habitats in search of the animals to be found there.

Roy and Jan have assembled a timely snapshot of our current understanding of ecotourism, both as a concept worthy of scientific inquiry and as an increasingly significant segment of global

commerce and industry. A terrific piece of work! Sam Ham, University of Idaho, US In the 30 or so year since it became established in the tourism literature and in tourism practice, ecotourism has attracted as many proponents as opponents. This Handbook now brings together some of the leading scholars worldwide in this field, to explore the current position of this form of tourism. In doing so, it offers serious critiques, it explores meanings and paradoxes, it offers best practices and it looks to the future. It is the Handbook for one of tourism's fastest growing and controversial sectors. David Airey, University of Surrey, UK This is a most welcome and needed book. With a very strong editorial team and contributing authors, the Handbook covers all the key issues of ecotourism. It cuts through the confusion surrounding the much-misunderstood concept of ecotourism, clearly dealing with definitions, concepts and research issues. The Handbook is particularly welcome for its focus on the visitor experience, a strength of the editors, and for clearly linking the theory of ecotourism with practice in the field. Christopher Cooper, Oxford Brookes University, UK This Handbook brings together contributions from over forty international experts in the field of ecotourism. It provides a critical review and discussion of current issues and concepts it challenges readers to consider the boundaries of what ecotourism is, and could be. The Handbook provides practical information regarding the business of ecotourism; insights into ecotourist behaviour and visitor experiences; and reflections on the practice of ecotourism in a range of different contexts. The Handbook is designed to be a valuable reference book for tourism scholars and researchers.

With unique personal insight, experience, and hard science, *Animals in Translations* is the definitive, groundbreaking work on animal behavior and psychology. Temple Grandin's professional training as an animal scientist and her history as a person with autism have given her a perspective like that of no other expert in the field of animal science. Grandin and coauthor Catherine Johnson present their powerful theory that autistic people can often think the way animals think—putting autistic people in the perfect position to translate “animal talk.” Exploring animal pain, fear, aggression, love, friendship, communication, learning, and even animal genius, Grandin is a faithful guide into their world. *Animals in Translation* reveals that animals are much smarter than anyone ever imagined, and Grandin, standing at the intersection of autism and animals, offers unparalleled observations and extraordinary ideas about both.

As evidenced in the record, whales evolved from herbivorous forest-dwelling ancestors that resembled tiny deer to carnivorous monsters stalking lakes and rivers and to serpentlike denizens of the coast. The threatened species categories used in Red Data Books and Red Lists have been in place for almost 30 years. The IUCN Red List Categories and Criteria provide an easily and widely understood system for classifying species at high risk of global extinction, so as to focus attention on conservation measures designed to protect them. This latest version of the classification system was adopted by the IUCN Council in February 2001 and reflects comments from the IUCN and SSC memberships and the final meeting of the Criteria Review Working Group.

*Wildlife in a Changing World* presents an analysis of the 2008 IUCN Red List of Threatened Species. Beginning with an explanation of the IUCN Red List as a key conservation tool, it goes on to discuss the state of the world's species and provides the latest information on the patterns of species facing extinction in some of the most important ecosystems in the world, highlighting the reasons behind their declining status. Areas of focus in the report include: freshwater biodiversity, the status of the world's marine species, species susceptibility to climate change impacts, the Mediterranean biodiversity hot spot, and broadening the coverage of biodiversity assessments.

Why do people go to zoos? Is the role of zoos to entertain or to educate? In this provocative book, the authors demonstrate that zoos tell us as much about humans as they do about animals and suggest that while animals may not need zoos, urban societies seem to. A new introduction takes note of dramatic changes in the perceived role of zoos that have occurred since the book's original publication.
