This report is structured in five parts: national framework for traditional and complementary medicine (T&CM); product regulation; practices and practitioners; the challenges faced by countries; and, finally, the country profiles. Apart from the section on practices and practitioners, the report is consistent with the format of the report of the first global survey in order to provide a useful comparison. The section on practices and practitioners, which covers providers, education and health insurance, is a new section incorporated to reflect the emerging trends in T&CM and to gather new information regarding these topics at a national level. All new information received has been incorporated into individual country profiles and data graphs. The report captures the three phases of progress made by Member States; that is, before and after the first WHO Traditional Medicine Strategy (1999-2005), from the first global survey to the second global survey (2005-2012) and from the second survey to the most recent timeline (2012-2018).

The adoption by WHO's Member States of the Global Code of Practice in the International Recruitment of Health Personnel, and the implementation of it by so many countries, represent two of the biggest steps in recent years towards solving the shortage of health-care workers around the world. The countries' response has been a momentous achievement. Now, a third big step is being taken with the publication of this book. It underlines WHO's unwavering commitment to supporting the implementation of the Code and provides a wide range of detailed examples from the countries themselves of how they are tackling the many complex issues involved. It provides not just numerous insights into progress but also gives other countries valuable guidance and recommendations on how they, too, can implement the Code. Countries are encouraged to learn from the shared experiences, domestic solutions and multi-lateral cooperation described in this book, and move ahead to support and advance the Code's aspirational principles. By doing so, they also strengthen the campaign towards Universal Health Care - a campaign that requires innovative solutions to the health workforce shortage in order to be successful. The crux of the Code is the development of human resources for health through all aspects of education, improved retention and fair recruitment practices while encouraging technical collaboration and financial support. WHO is playing a leading role in these initiatives and stands ready to assist all its Member States in implementing the Code. We strongly recommend this book to health policy-makers and decision-takers in governments, nongovernmental organizations and other partners and stakeholders, including civil society. They will find it an indispensable guide to a better future for health-care personnel and the people they serve.

From the microscopic observation of infection to the widespread application of molecular techniques in taxonomy and epidemiology, to the genome sequencing of two major species and advances in biochemistry, phylogeny, and water treatment, new information on this fascinating genus continues to mount as we discover and utilize the latest scientific te

Academic geriatnclans are always looking for an improved objective, quantifiable measure of biological ageing in humans to replace that unphysiological and arbitrary scale 'years survived'. The MCQ may be the nearest we have come yet to achieving this Holy Grail. An individual's facility with the setting and answering of MCQs separates the medical genera tions more surely than years. I am only grateful I was educated in a less rigorous but perhaps more 'gentlemanly' era. If one appeared before an examiner neatly dressed with clean finger nails and the examination scripts were literate essays written in fountain pen then you were in - or so it seemed. For the past 20 years we have been evolving towards much more objective and rigorous assessment of knowledge and understanding of medicine of both undergraduate and postgraduate students. This process

has been exemplified by the evolution of what is now the seemingly ubiquitous MCQ. When initially presented as objective and quantifiable measures of clinical knowledge MCQs were the subject of scorn - how could they assess the art of medicine - the grey areas of clinical decision making? However they very rapidly overcame this antediluvian scepticism and I believe they have had an effect well beyond the limited area of competence measurement. They have induced or at the very least contributed to a shift towards a more rigorous, dare one say more scientific, approach to clinical medicine.

This report provides a picture of where we stand and what we have learned so far about maternity and paternity rights across the world. It offers a rich international comparative analysis of law and practice relating to maternity protection at work in 185 countries and territories, comprising leave, cash benefits, employment protection and non-discrimination, health protection, breastfeeding arrangements at work and childcare. Expanding on previous editions, it is based on an extensive set of new legal and statistical indicators, including coverage in law and in practice of paid maternity leave as well as statutory provision of paternity and parental leave and their evolution over the last 20 years. The report also takes account of the recent economic crisis and austerity measures. It shows how well national laws and practice conform to the ILO Maternity Protection Convention, 2000 (No. 183), its accompanying Recommendation (No. 191) and the Workers with Family Responsibilities Convention, 1981 (No. 156), and offers guidance on policy design and implementation. This report shows that a majority of countries have established legislation to protect and support maternity and paternity at work, even if those provisions do not always meet the ILO standards. One of the persistent challenges is the effective implementation of legislation, to ensure that all workers are able to benefit from these essential labour rights.
