Perhaps never before has an objective, evidence-based review of the intersection between gun violence and mental illness been more sorely needed or more timely. *Gun Violence and Mental Illness*, written by a multidisciplinary roster of authors who are leaders in the fields of mental health, public health, and public policy, is a practical guide to the issues surrounding the relation between firearms deaths and mental illness. Tragic mass shootings that capture headlines reinforce the mistaken beliefs that people with mental illness are violent and responsible for much of the gun violence in the United States. This misconception stigmatizes individuals with mental illness and distracts us from the awareness that approximately 65% of all firearm deaths each year are suicides. This book is an apolitical exploration of the misperceptions and realities that attend gun violence and mental illness. The authors frame both pressing social issues as public health problems subject to a variety of interventions on individual and collective levels, including utilization of a novel perspective: evidence-based interventions focusing on assessments and indicators of dangerousness, with or without indications of mental illness. Reader-friendly, well-structured, and accessible to professional and lay audiences, the book: Reviews the epidemiology of gun violence and its relationship to mental illness, exploring what we know about those who perpetrate mass shootings and school shootings. Examines the current legal provisions for prohibiting access to firearms for those with mental illness and whether these provisions and new mandated reporting interventions are effective or whether they reinforce negative stereotypes associated with mental illness. Discusses the issues raised in accessing mental health treatment in regard to diminished treatment resources, barriers to access, and involuntary commitment. Explores novel interventions for addressing these issues from a multilevel and multidisciplinary public health perspective that does not stigmatize people with mental illness. This includes reviews of suicide risk assessment; increasing treatment engagement; legal, social, and psychiatric means of restricting access to firearms when people are in crisis; and, when appropriate, restoration of firearm rights. Mental health clinicians and trainees will especially appreciate the risk assessment strategies presented here, and mental health, public health, and public policy researchers will find *Gun Violence and Mental Illness* a thoughtful and thought-provoking volume that eschews sensationalism and embraces serious scholarship.

Guided by theory and evidence, the book reviews approaches to risk factor identification and modification for the major causes of mortality in adulthood, including cancer, stroke, and cardiovascular disease. Topical coverage in this book includes: · the practical applications of genomics and proteomics to personalizing prevention · transformative approaches to practice change, including the patient-centered medical home, academic detailing, and practice facilitation · Engaging self-management and behavior change using counseling tools (goal setting, assessing the stage of change, motivational interviewing, and the five A's) *Prevention Practice in Primary Care* is a vital, practical guidebook for the implementation of evidence-based prevention to improve patient health. The current societal and social reality in Europe is undergoing far-reaching changes due to the phenomenon of migration. Educational policy and pedagogical practice play a key role in the academic support of immigrant children in schools. In this volume, the connections between societal change and educational issues in relation to two southern European nations, Spain and Italy, are analyzed. The stories of intercultural communication and integration of these two case studies focus on five themes: linguistic diversity, the performance gap, teacher training programs and school culture, the role of music education in multicultural and multilingual contexts, and the development of a supranational education as an improvement for multicultural education. The volume is of particular relevance for educational researchers, as well as for the interested general reader. It takes the reader to public and private entities in Italy and Spain, where intercultural education is part of societal discourse, and serves as a sounding board for the discussion of developments in other parts of Europe with similar demographics.

This eBook contains a collection of peer-reviewed original and review articles published in either *Frontiers in Endocrinology* or *Frontiers in Physiology* focused on the research topic *Optimizing Exercise for the Prevention and Treatment of Type 2 Diabetes*.

As one of the first texts of its kind, Evidence-Based Practice in Athletic Training contains essential information on the fundamentals of evidence-based practice (EBP) for students who are working toward certification in athletic training and athletic trainers who wish to stay up to date on best practices in the field. With EBP, all clinical decisions are based on available research studies, and these studies are selected and assessed according to specific criteria that yield evidence of benefit. EBP is a continuing education requirement for athletic trainers who are certified with the Board of Certification (BOC). Grounded in solid science, Evidence-Based Practice in Athletic Training explains the basics of EBP and the research design methods that are so vital to its implementation. Starting in part I, the text introduces the various levels of evidence, well-built question development using the PICO technique (patient problem or population, intervention, comparison, and outcomes), the five steps of searching for evidence, and search techniques. Part II guides readers through researching specific questions and evaluating research studies, including how to incorporate the evidence they find into their clinical practice. Part III reviews the various research types, their uses and benefits, and research ethics as a critical part of the process of EBP. Through these step-by-step chapters, readers will be able to formulate clinical questions, perform research on current studies, analyze the available data, and apply the principles in their practice in order to provide the best and most accurate care possible. In addition to in-depth information on the principles and application of EBP, Evidence-Based Practice in Athletic Training presents clinically based scenarios that allow students to apply their recently acquired knowledge to real-life situations, thus encouraging a deeper understanding of the topics presented throughout the text. These scenarios allow those who are learning EBP concepts for the first time to understand how EBP is incorporated clinically. The most efficient, systematic, and thorough resource of its kind, Evidence-Based Practice in Athletic Training encourages students and current certified athletic trainers to ask meaningful questions, gain the knowledge they need for excelling in future practice, and rise to the top of their profession. For students who want a thorough skill base in EBP and for credentialed health care professionals who seek further knowledge in the area, Evidence-Based Practice in Athletic Training will help all current and future athletic trainers provide the best care for their athletes and clients. Evidence-Based Practice in Exercise Science: The Six-Step Approach equips readers with the basic skills and competencies to discern the value of scientific research and become evidence-based practitioners.

Organized around the four types of studies typically conducted by effective managers and programs, Practical Research Methods for Nonprofit and Public Administrators integrates traditional research methods topics with specific management applications. Prioritization, Delegation, and Assignment: Practice Exercises for the NCLEX® Examination is the only review book on the market with a focus on prioritization and management of care—just like the current NCLEX Examination itself! The workbook's unique approach establishes your foundational knowledge and then provides exercises of increasing difficulty to help you build confidence in your prioritization, delegation, and patient assignment skills. It offers unique preparation for the NCLEX Examination and effectively equips you to practice in today's fast-paced healthcare environment. UNIQUE! Emphasis on the NCLEX Management-of-Care Focus: LaCharity is the only workbook available that focuses on the NCLEX Exam's management-of-care focus. No other book on the market addresses the heavy management-of-care emphasis - consisting of prioritization, delegation, and patient assignment - of the current NCLEX Examination (17-23% of the 2013 NCLEX-RN Exam). Graduating seniors report that LaCharity has been invaluable in preparing them to pass the NCLEX Exam and enter into practice. UNIQUE! Three-Part Organization: The book consists of three parts, each of which builds on the previous one: . Part 1: Introduction; Part 2: Prioritization, Delegation, and Assignment in Common Health Scenarios; Part 3: Prioritization, Delegation, and Assignment in Complex Health Scenarios. This organization establishes foundational knowledge and then provides exercises of increasing difficulty to help students build confidence in their prioritization,

delegation, and patient assignment skills. It also helps students move from passing the NCLEX-RN Exam to "hitting the ground running" as they transition into clinical practice. Part 1: Introduction: Part 1, consisting of a chapter by delegation expert Ruth Hansten, provides guidelines for prioritization, delegation, and patient assignment decisions. The Introduction provides a concise, practical foundation on which Parts 2 and 3 build. Part 2: Prioritization, Delegation, and Assignment in Common Health Scenarios: Organized by body system, the chapters in Part 2 begin to give students practice in applying the principles from Part 1 to relatively straightforward scenarios involving single patients or simple patient assignments. Straightforward NCLEX-style multiple-choice, multiple-select, ordering, and short-answer questions help students develop and build confidence in prioritization, delegation, and patient assignment skills while working within the confines of relatively simple health scenarios. Part 3: Prioritization, Delegation, and Assignment in Complex Health Scenarios: Unfolding cases in Part 3 gradually immerse students in realistically complex clinical situations involving patients with complicated health problems or challenging assignment issues. These unfolding cases build on the skills learned in Part 2 to equip students to make sound decisions in realistic, complex health scenarios involving complicated health problems and/or challenging patient assignment decisions. The "unfolding" nature of each case realistically demonstrates the progression of typical health scenarios and helps students learn to "think like nurses" by developing what Benner (2010) calls "clinical imagination." Answer Key: The in-depth Answer Key at the back of the book provides not only the correct answer but also a detailed rationale and an indication of the focus of the question, whether prioritization, delegation, supervision, or patient assignment. Detailed rationales encourage formative assessment, in which students learn as much from answering incorrectly as they do from answering correctly.

Expanded content focus to include psychiatric/mental health, OB/maternity, and pediatrics along with med-surg areas New chapters on infection control and obstetrics

The first volume of this ground-breaking book critically examines how and why arts-based methods such as choir conducting workshops and dialogue improvisation can make a difference in improving professional practice. Taking a 'human-centred' approach, it delivers an insightful account of what these approaches do differently to achieve a new mode of learning – 'sensuous learning' – that cultivates professional judgment to serve the common good, simultaneously supporting personal and collective growth. The chapters present cutting edge examples of multiple ways arts-based methods underpin learning arenas for expanding leadership and improving professional practice. The reflexivity cultivated through these learning arenas has the unique potential to improve professional practice, not merely by enhancing competence but also by cultivating character and conscience, which is central in making judgments that serve the common good. These benefits are relevant for professional practitioners sharpening the skills and behaviours needed in organisations, including creativity, diversity, imagination, and improvisation.

In recent years, an important and encouraging development in the practice of archaeology and historical preservation has been the markedly increased number of collaborations among archaeologists, educators, preservation planners, and government managers to explore new approaches to archaeological and heritage education and training to accommodate globalization and the realities of the 21st century worldwide. But what is the collective experience of archaeologists and cultural heritage specialists in these arenas? Should we be encouraged, or discouraged, by national and international trends? In an attempt to answer these questions, this volume examines and gives representational examples of the respective approaches and roles of government, universities, and the private sector in meeting the educational/training needs and challenges of practicing archaeologists today.

Handbook of College and University Teaching: A Global Perspective presents international perspectives on critical issues impacting teaching and learning in diverse higher education environments, all with a unique global view. The International Handbook of Research in Professional and Practice-based Learning discusses what constitutes professionalism, examines the concepts and practices of professional and practice-based learning, including associated research traditions and educational provisions. It also explores professional learning in institutions of higher and vocational education as well the practice settings where professionals work and learn, focusing on both initial and ongoing development and how that learning is assessed. The Handbook features research from expert

contributors in education, studies of the professions, and accounts of research methodologies from a range of informing disciplines. It is organized in two parts. The first part sets out conceptions of professionalism at work, how professions, work and learning can be understood, and examines the kinds of institutional practices organized for developing occupational capacities. The second part focuses on procedural issues associated with learning for and through professional practice, and how assessment of professional capacities might progress. The key premise of this Handbook is that during both initial and ongoing professional development, individual learning processes are influenced and shaped through their professional environment and practices. Marc Orlando looks at the gap between practice and research in Translation & Interpreting Studies and at the way this gap could be bridged. He focuses on the way practice and research can inform each other in the education and training of future translators and interpreters, with the aim of training future professionals both as practitioners and researchers in an educational environment that would marry both vocational and academic elements. It is proposed that promoting the status of practisearchers would help to fill the current gap between practitioners, researchers and Translation & Interpreting educators. Suggestions are made concerning ways of undertaking research and gaining new insights into Translation & Interpreting Studies from professional practice and experience, and of designing new didactic tools for education and training from experiential and theoretical knowledge.
