This book explores social mechanisms that drive network change and link them to computationally sound models of changing structure to detect patterns. This text identifies the social processes generating these networks and how networks have evolved. Reviews: "this book is easy to read and entertaining, and much can be learned from it. Even if you know just about everything about large-scale and temporal networks, the book is a worthwhile read; you will learn a lot about SNA literature, patents, the US Supreme Court, and European soccer." (Social Networks) "a clear and accessible textbook, balancing symbolic maths, code, and

visual explanations. The authors' enthusiasm for the subject matter makes it enjoyable to read" (JASSS)

The Florida College and Career Readiness Initiative is a statewide policy that mandates college placement testing of 11th-graders who meet high school graduation criteria but are unlikely to meet college readiness criteria. Students who score below college-ready on the Postsecondary Education Readiness Test (PERT) are required to take math and English/language arts college readiness and success courses in 12th grade. This report discusses qualitative feedback from students, teachers, district administrators, and college faculty and staff from the 2013/14 school year. It examines how educators perceive the effectiveness of the initiative and barriers to implementation, what the grade 12 courses look like in practice, how K-12 and postsecondary institutions collaborate around the initiative, what types of promising practices Florida's state colleges use to prepare students for college and careers, and what high school students think could be done to better prepare them for post-high school plans. A set of supplemental tables and figures is appended. [This report was written with Caitlin Ahearn, Jen Atkin, Michael Flory, Jennifer Lansing, Juliana Pearson, James Rosenbaum, and Christopher Sun.].

Optimization is of central concern to a number of disciplines. Operations Research and Decision Theory are often considered to be identical with optimization. But also in other areas such as engineering design, regional policy, logistics and many others, the search for optimal solutions is one of the prime goals. The methods and models which have been used over the last decades in these areas have primarily been "hard" or "crisp", i. e. the solutions were considered to be either feasible or unfeasible, either above a certain aspiration level or below. This dichotomous structure of methods very often forced the modeller to approximate real problem situations of the more-or-less type by yes-or-no-type models, the solutions of which might turn out not to be the solutions to the real problems. This is particularly true if the problem under consideration includes vaguely defined relationships, human evaluations, uncertainty due to inconsistent or incomplete evidence, if natural language has to be modelled or if state variables can only be described approximately. Until recently, everything which was not known with certainty, i. e. which was not known to be either true or false or which was not known to either happen with certainty or to be impossible to occur, was modelled by means of probabilities. This holds in particular for uncertainties concerning the occurrence of events.

The Country of Kent, situated in the south-east corner of England, is famous for the "white cliffs of Dover" which face the French coast only 20 miles away. In the centre of the Country there is an area known as The Weald, often referred to as "the garden of England" as it is abundant in the growing of fruit of all kinds and until the 1970's grew most of the hops used in the production of English beer. Our fictional story concerns the lives of a variety of residents in a typical village in this area immediately prior to the 2nd World War and throughout until its end in 1945; their romance, successes, failures, disappointments and tragedies. The author lived throughout this period in a village in The Weald of Kent.

She explains, in a fascinating account, how and why our food has lost its nutrition and shows us how this can be reversed. Margaret also draws on ancient practices of vibrational medicine, and explains how these practices can be easily embraced in our modern world, helping us return to our intuition and use focused thought to help aid our levels of wellness. Wow, what a book! This is one of the most fascinating sprints through cutting edge wellness thinking I've read in a long time. And I do a lot of reading." - Joel Salatin, farmer, author, integrity food advocate Margaret Bridgeford has woven incisive research to create a vivid image of the landscapes of soil, body and soul, revealing the vibrational connection between them all.
