Workbook to Accompany: Physics for Students of Science and Engineering is 25-chapter workbook designed to accompany the Physics for Students of Science and Engineering textbook. This workbook is a collection of question and problems that are representative of the topics covered in the textbook. The format of this workbook is based on individual chapters of the textbook. The questions and problems associated with each chapter begin with a one-page review of the definitions, units, and simple relationships appropriate to that chapter. Each review, in the form of questions and one-step problems, is followed by more comprehensive problems, formatted one to a page. Each problem is stated at the top of a page, and the student is provided space to execute each element of the problem-solving procedure. A detailed solution to each problem is presented in the same form, such as in the format of the problem solving procedure, on the reverse side of the page. The solution page often includes comments and suggestions appropriate to the specific type of problem

being considered. The opening chapters include discussions on particle kinematics and dynamics; applications of Newton's laws; and work, power, and energy. The subsequent chapters explore the concepts of momentum, collisions, rotational motion, oscillations, mechanics of fluids, heat, and thermodynamics. Other chapters examine the principles of electric charge, electric fields, electric potential, capacitance, current, resistance, direct-current circuits, magnetic fields, and electromagnetic oscillations. The remaining chapters deal with wave motion, sound, geometric and physical optics, special relativity, early quantum physics, and wave mechanics. This workbook will be of great benefit to physics teachers and students.

(Key topics: organic chemistry, hydrocarbons, black gold, benzene, organic acids, ethers, plastics, alcohol, changing molecules, carbohydrates, nitrogen compounds, fibers, vitamins, protein, colloids, Pasteur, Baekeland, Eijkman) IPC consists of twelve chapters of text and twelve companion student activity books. This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for two credits. (May require supplemental local classes/labs.)
