The International Baccalaureate Primary Years Programme stands in a proud tradition of reflective educators incorporating best practice into international schools. For the PYP to maintain relevance in education today, inquiry has to be rethought, refreshed and reapplied. Taking the PYP Forward does exactly that. Raising many questions and recognising the new challenges facing educators, this collaborative work brings together voices from both within and outside of the PYP.

Edited by three leading figures in the field, this book offers an absolutely authoritative interpretation of international education today. Under the umbrella of groups such as the International Baccalaureate Organization, academic research, increasing student numbers and interest from national school systems, international schools are rapidly developing in terms of curriculum, standards and influence. This book brings together present thinking on all aspects of international education, its management and the best practices. Truly international in scope, this is a book that anyone involved with international education should read.

A substantial update of the popular resource for the thinking skills movement offers new approaches to create schools and classrooms that truly challenge students to use their intelligence.

"Saving" The Giving Tree As part of my Bachelor of Education degree (over twenty years ago now!) we were asked to write a children's story. I chose to rewrite Shel Silverstein's classic, The Giving Tree, in a brighter light. I always felt this touching story was a little too sad. I also felt it missed the opportunity to impart an important perspective; the messages of stewardship and symbiosis, central to First

Nations and Aboriginal cultures the world over. This is the message I hope this book can share with new generations of young people. As a Canadian of Metis heritage, I feel it is an important message. There are other parts of First Nations culture touched upon as well. I have taken literary license in their incorporation. Tobacco and smudging are sacred rites, and they are meant to show respect, just not necessarily in the way they are portrayed here. Flutes and love songs are also a part of many cultures as are canoes and the use of lodge poles. I hope this book can also act as a springboard for further study. This story offers a different perspective on the friendship that can exist between human (the boy Meekwun) and nature (as personified through the tree). Informed from the First Nations' perspective of stewardship over the Earth, this re-imagining is one that offers a view of interdependence and encourages young readers and adults alike to be more thoughtful in their interactions with our living home. It is meant to be read and enjoyed by individual readers and as a sharing opportunity for discussion between children and their care-givers, teachers, friends and classmates as they define their own relationship to our home. It has been particularly rewarding to use this book as a comparative literature study with my students over the years when read in contrast to Mr. Silverstein's book as well. Sean Thompson, 2020

'Can give you some idea of the vision you are trying to transmit amidst all those examination results' - "Management in Education " 'The powerful ideas ... in the First Edition have gained ... urgency from the realities of the political policies for education which the intervening years have witnessed in both the USA and the UK. .... the book s main theme - the narrowness of the concept of education encapsulated in those policies - gains added force from the growing predominance of technicist approaches to curriculum planning' - "Professor A V Kelly, Goldsmiths College, University of London " *Cognition and Curriculum* became a seminal book which was essential reading for students of education over the last decade. Now, as the back-to-basics curriculum and standardized modes of evaluation - whose very foundations Elliot W Eisner was questioning a decade ago - are again finding favour with politicians, Eisner has revised his classic work. A special edition for adults of Katherine Applegate's New York Times-bestselling novel about an oak tree and a crow who help their neighbors embrace their differences. Trees can't tell jokes, but they can certainly tell stories. . .

. Red is an oak tree who is many rings old. Red is the neighborhood "wishtree"—people write their wishes on pieces of cloth and tie them to Red's branches. Along with a crow named Bongo and other animals who seek refuge in Red's hollows, this wishtree watches over the neighborhood. When a new family moves in, not everyone is welcoming, and Red's experience as a wishtree is more important than ever. With a message of inclusion for dreamers and welcomers, this is a book for our lives and times. "A beautifully written, morally bracing story that will leave its imprint on a reader of any age."

Discover why and how schools must become places where thinking is valued, visible, and actively promoted. As educators, parents, and citizens, we must settle for nothing less than environments that bring out the best in people, take learning to the next level, allow for great discoveries, and propel both the individual and the group forward into a lifetime of learning. This is something all

teachers want and all students deserve. In *Creating Cultures of Thinking: The 8 Forces We Must Master to Truly Transform Our Schools*, Ron Ritchhart, author of *Making Thinking Visible*, explains how creating a culture of thinking is more important to learning than any particular curriculum and he outlines how any school or teacher can accomplish this by leveraging 8 cultural forces: expectations, language, time, modeling, opportunities, routines, interactions, and environment. With the techniques and rich classroom vignettes throughout this book, Ritchhart shows that creating a culture of thinking is not about just adhering to a particular set of practices or a general expectation that people should be involved in thinking. A culture of thinking produces the feelings, energy, and even joy that can propel learning forward and motivate us to do what at times can be hard and challenging mental work. A proven program for enhancing students' thinking and comprehension abilities *Visible Thinking* is a research-based approach to teaching thinking, begun at Harvard's Project Zero, that develops students' thinking dispositions, while at the same time deepening their understanding of the topics they study. Rather than a set of fixed lessons, *Visible Thinking* is a varied collection of practices, including thinking routines—small sets of questions or a short sequence of steps—as well as the documentation of student thinking. Using this process thinking becomes visible as the students' different viewpoints are expressed, documented, discussed and reflected upon. Helps direct student thinking and structure classroom discussion Can be applied with

Carol Ann Tomlinson and Tonya R. Moon take an in-depth look at assessment and show how differentiation can improve the process in all grade levels and subject areas. After discussing differentiation in general, the authors focus on how differentiation applies to various forms of assessment--pre-assessment, formative assessment, and summative assessment--and to grading and report cards. Readers learn how differentiation can --Capture student interest and increase motivation --Clarify teachers' understanding about what is most important to teach --Enhance students' and teachers' belief in student learning capacity; and --Help teachers understand their students' individual similarities and differences so they can reach more students, more effectively Throughout, Tomlinson and Moon emphasize the importance of maintaining a

consistent focus on the essential knowledge, understandings, and skills that all students must acquire, no matter what their starting point. Detailed scenarios illustrate how assessment differentiation can occur in three realms (student readiness, interest, and learning style or preference) and how it can improve assessment validity and reliability and decrease errors and teacher bias. Grounded in research and the authors' teaching experience, *Assessment and Student Success in a Differentiated Classroom* outlines a common-sense approach that is both thoughtful and practical, and that empowers teachers and students to discover, strive for, and achieve their true potential.

A progressive, research-based approach for making learning visible. Based on the Reggio Emilia approach to learning, *Visible Learners* highlights learning through interpreting objects and artifacts, group learning, and documentation to make students' learning evident to teachers. Visible classrooms are committed to five key principles: that learning is purposeful, social, emotional, empowering, and representational. The book includes visual essays, key practices, classroom examples. Show how to make learning happen in relation to others, spark emotional connections, give students power over their learning, and express ideas in multiple ways. Illustrate Reggio-inspired principles and approaches via quotes, photos, student and teacher reflections, and examples of student work. Offer a new way to enhance learning using progressive, research-based practices for increasing collaboration and critical thinking in and outside the classroom. *Visible*

Marian called it Roxaboxen. (She always knew the name of everything.) Come with us there, where all you need to gallop fast and free is a long stick and a soaring imagination. In glowing desert hues, artist Barbara Cooney has caught the magic of Alice McLerran's treasured land of Roxaboxen -- a place that really was, and, once you've been there, always is.

At a time when globalization and technology are dramatically altering the world we live in, is education reform in the United States headed down the right path? Are schools emphasizing the knowledge and skills that students need in a global society--or are they actually undermining their strengths by overemphasizing high-stakes testing and standardization? Are education systems in China and other countries really as superior as some people claim? These and other questions are at the heart of author Yong Zhao's thoughtful and informative book. Born and raised in China and now a distinguished professor at Michigan State University, Zhao bases many of his observations on firsthand experience as a student in China and as a parent of children attending school in the United States. His unique perspective leads him to conclude that "American education is at a crossroads" and

"we need to change course" to maintain leadership in a rapidly changing world. To make his case, Zhao explains \* What's right with American education; \* Why much of the criticism of schools in the United States has been misleading and misinformed; \* Why China and other nations in Asia are actually reforming their systems to be more like their American counterparts; \* How globalization and the "death of distance" are affecting jobs and everyday life; and \* How the virtual world is transforming the economic and social landscape in ways far more profound than many people realize. Educators, policymakers, parents, and others interested in preparing students to be productive global citizens will gain a clear understanding of what kinds of knowledge and skills constitute "digital competence" and "global competence," and what schools can--and must--do to meet the challenges and opportunities brought about by globalization and technology.
