Exploring everything from contemporary challenges to ocean security this book offers detailed insights into the increasing activities of state and non-state actors at sea. Chapters revisit the United Nations Convention on the Law of the Sea (LOSC), highlighting how not all maritime security threats can be addressed by this, and further looking at the ways in which the LOSC may even hinder maritime security.

Private Enforcement of EU Law before National Courts successfully illustrates how legal actions brought by private parties can be instrumental in strengthening compliance with EU law. Through a detailed examination of selected EU legislation across the fields of procurement, intellectual property rights, consumer protection, and competition law, Folkert Wilman compares various remedies and procedures in which private parties have been utilised in the redress of grievances under EU law. An essential reference work for practicing lawyers acting before domestic courts in matters of EU Law, this timely publication offers new insights into private enforcement as a supplementary enforcement instrument, and offers clarity on how such a tool impacts on contractual remedies, procedural issues and the role of judicial review.

The Springer Handbook of Odor is the definitive guide to all aspects related to the study of smell and their impact on human life. For the first time, this handbook aligns the

sensory-chemo-analytical characterization of everyday smells encountered by mankind, with the elucidation of perceptual, hedonic, behavioral and physiological responses of humans to such odors. From birth onwards we learn to interact with our environment using our sense of smell. Moreover, evolutionary processes have engendered a multi-faceted communication that is supported – even dominated – by olfaction. This compilation examines the responses of humans to odors at different stages of life, thereby building a foundation for a widely overseen area of research with broader ramifications for human life. The expert international authors and editor align aspects, concepts, methodologies and perspectives from a broad range of different disciplines related to the science of smell. These include chemistry, physiology, psychology, material sciences, technology but also disciplines related to linguistics, culture, art and design. This handbook, edited by an internationally renowned aroma scientist with the support of an outstanding team of over 60 authors, is an authoritative reference for researchers in the field of odors both in academia and in industry and is also a useful reference for newcomers to the area. Comprehensive analysis showing that utilities and welfare services are important building blocks for the EU social market economy.

Financial regulation has dramatically evolved and strengthened since the crisis on both sides of the Atlantic, with enhanced international coordination through the G-20 and the Financial Stability Board and, at the regional level, a definite contribution from the

European Union. However the new regulatory environment has its critics, with many divergent voices arguing that over-regulation has become a root cause of our current economic stagnation. This book provides a bigger picture view of the impact and future of financial regulation in the EU, exploring the relationship between microeconomic incentives and macroeconomic growth, regulation and financial integration, and the changes required in economic policy to further European integration. Bringing together contributions from law, economics and management science, it offers readers an accessible but rigorous understanding of the current state of play of the regulatory environment, and on the future challenges. Coverage will include:

- A review of the recent regulatory changes from a legal and economic perspective
- Analysis of how the economic model of financial institutions and entities is impacted by the new frameworks
- How to improve securitization and new instruments under MIFID II
- Issues in the enhanced supervision under delegated acts for AIFMD, CRR-CRD IV and Solvency II
- How long term funding can be supplied in lieu of the non-conventional monetary policies
- A new architecture for a safer and more efficient European financial system

Financial Regulation in the EU provides much needed clarity on the impact of new financial regulation and the future of the economy, and will prove a must have reference for all those working in, researching and affected by these changes. The AREAER provides a description of the foreign exchange arrangements, exchange and trade systems, and capital controls of all IMF Member countries.

Annual Report on Exchange Arrangements and Exchange Restrictions 2016 International Monetary Fund
This handbook offers detailed descriptions of EU competition law, including mergers and public authorities. Above all, it analyzes and discusses recent decisions of the ECJ and the General Court. Presenting systematically structured and theoretically founded content, the book also includes recommendations for practitioners. Special attention is paid to the scope of penalties and the influence on fundamental rights. Rounding out the book, the conflict between safeguarding confidential information and the effectiveness of private and public enforcement is discussed intensively in the context of the new Directive 2014/104/EU.

This Commentary provides an article-by-article summary of the TEU, the TFEU, and the Charter of Fundamental Rights, offering a quick reference to the provisions of the Treaties and how they are interpreted and applied in practice. Written by a team of contributors drawn from the Legal Service of the European Commission and academia, the Commentary offers expert guidance to practitioners and academics seeking fast access to the Treaties and current practice. The Commentary follows a set structure, offering a short overview of the Article, the

Article text itself, a key references list including essential case law and legislation, and a structured commentary on the Article itself. The editors and contributors combine experience in practice with a strong academic background and have published widely on a variety of EU law subjects.

Nigel Foster provides a concise and clear explanation of EU law, covering both institutional aspects and key substantive areas, offering an accessible entry point to the subject.

This Review contains a General Survey of Policy Developments based on material submitted by OECD member countries, information gathered on observer and enhanced engagement countries, and an overview of recent activities of the Committee of Fisheries.

In the field of Analytical Chemistry and, in particular, whenever a quali-quantitative analysis is required, until a few years ago, reference was made exclusively to instrumental methods (more or less hyphenated) which, once validated, were able to provide the answers to the questions present, even if only in a limited way to analytical targets. Nowadays, the landscape has become considerably complicated (natural adulterants, assessment of geographical origin, sophistication, need for non-destructive analysis, search for often unknown compounds), and new procedures for processing data have greatly increased the potential of analyses that are

conducted (even routinely) in the laboratory. In this scenario, chemometrics is master, able to manage and process a huge amount of information based both on data relating only to the analytes of interest, but also by applying “general” procedures to process raw untargeted analysis data. It is within this strand of analysis that many of the works reported in this Special Issue fall. In the succession of works in this printed version, the criterion that guided us was to highlight how—starting exclusively from chromatographic techniques (HPLC and GC) with conventional detectors and moving to exclusively spectroscopic techniques (MS, FT-IR and Raman)—it is possible arrive at extremely powerful coupled techniques and procedures (HPLC and FT-IR) able to meet research needs. Finally, at the end of the printed volume, there are two reviews that surveying the state of the art regarding the assessment of authenticity through qualitative analyses and the application of chemometrics in the pharmaceutical field in the study of forced drug degradation products. From the succession of works (and, above all, from the various application fields) it can immediately be seen how the application of chemometrics and its procedures to both raw and processed data is a powerful means of obtaining robust, reproducible, and predictive information. In this manner, it is possible to create models able to explain and respond to the original problem in a

much more detailed way. , and Honghe through Fourier transform mid infrared (FT-MIR) spectra combined with partial least squares discriminant analysis (PLS-DA), random forest (RF), and hierarchical cluster analysis (HCA) methods. Melucci and collaborators apply chemometric approaches to non-destructive analysis of ATR-FT-IR for the determination of biosilica content. This value was directly evaluated in sediment samples, without any chemical alteration, using attenuated total reflection Fourier transform infrared (ATR-FTIR) spectroscopy, and the quantification was performed by combining the multivariate standard addition method (MSAM) with the net analyte signal (NAS) procedure to solve the strong matrix effect of sediment samples. Still in the food and food supplements field, Anguebes-Franceschi and collaborators report an article where 10 chemometric models based on Raman spectroscopy were applied to predict the physicochemical properties of honey produced in the state of Campeche, Mexico.

This new edition provides a definitive, comprehensive and systematic analysis of the law governing the EU's action in the world. Updated to take into account the Lisbon Treaty and recent case law, the book covers all constitutional aspects of the EU's international action and the procedures for treaty-making. It analyses the relationship between the EU and its Members with emphasis on mixed

agreements, and the status of international law in the EU legal order. It explores the links between the EU and international organisations (such as the WTO) and examines the EU's external economic and political relations and its various links with third countries, including its neighbours. It analyses, amongst others, the Common Commercial Policy, sanctions, the Common Foreign and Security Policy, and the Common Security and Defence Policy. This new edition is the most up-to-date work of its kind, examining both the law and practice in a wide range of external policies, placing the law in its political and economic context and exploring the links between the EU's external and internal actions.

Clay's Handbook of Environmental Health, since its first publication in 1933, has provided a definitive guide for the environmental health practitioner, or reference for the consultant or student. This 21th edition continues as a first point of reference, reviewing the core principles, techniques and competencies, and then outlining the specialist subjects. It has been refocused on the current curriculum of the UK's Chartered Institute of Environmental Health but should also readily suit the generalist or specialist working outside the UK.

This book offers a comprehensive account of the status and dynamics of people participating in the small-scale fisheries (SSF) of Europe. It covers the situation of SSF in 25 coastal countries, thereby providing a portrait of almost every coastal country on the continent and analyzing the recent evolution of the sector. Small-scale fisheries are argued to be extremely important in Europe, as they provide employment and welfare, while increasing food sovereignty and maintaining communities in coastal areas. The recent worldwide focus on SSF derives from their environmental sustainability, which distinguishes many of their activities from those of large-scale fisheries. This book analyses the diversity of SSF and shows how fishing communities

have sometimes developed successful governing models, demonstrating social and economic resilience. While the book emphasizes the strengths of SSF and the synergies that occur with other marine sectors, it also presents cases of failure, in which collective action and policy have actually contributed to a weakening of the sector. In this context, the book shows how governmental policies toward SSF vary considerably from country to country, in a way that is not entirely consistent with European policies.

perspective. It fundamentally addresses the dichotomy between the state-oriented character

This collection addresses the central question of how the current international framework for the regulation of fisheries may be strengthened in order to meet the challenges posed by changing fisheries and ocean conditions, in particular climate change. International fisheries law has developed significantly since the 1990s, through the adoption and establishment of international instruments and bodies at the global and regional levels. Global fish stocks nevertheless remain in a troubling state, and fisheries management authorities face a wide array of internal and external challenges, including operational constraints, providing effective management advice in the face of scientific uncertainty and non-compliance by States with their international obligations. This book examines these challenges and identifies options and pathways to strengthen international fisheries law. While it has a primarily legal focus, it also features significant contributions from specialists drawn from other disciplines, notably fisheries science, economics, policy and international relations, in order to provide a fuller context to the legal, policy and management issues raised. Rigorous and comprehensive in scope, this will be essential reading for lawyers and non-lawyers interested in international fisheries regulation in the context of profoundly changing ocean conditions.

chemistry and microbiology of milk for cheesemaking, starter cultures, coagulation of milk by enzymes or by acidification, the microbiology and biochemistry of cheese ripening, the flavor and rheology of cheese, processed cheese, cheese as a food ingredient, public health and nutritional aspects of cheese, and various methods used for the analysis of cheese. The book contains copious references to other texts and review articles.

This book constitutes the proceedings of the 16th International Conference on Detection of Intrusions and Malware, and Vulnerability Assessment, DIMVA 2019, held in Gothenburg, Sweden, in June 2019. The 23 full papers presented in this volume were carefully reviewed and selected from 80 submissions. The contributions were organized in topical sections named: wild wild web; cyber-physical systems; malware; software security and binary analysis; network security; and attack mitigation. This book deals with the interconnection between the Brussels I Recast and Rome I Regulations and addresses the question of uniform interpretation. A consistent understanding of scope and provisions is suggested by the preamble of the Rome I Regulation. Without doubt, it is fair to presume that the same terms bear the same meaning throughout the Regulations. The author takes a closer look at the Regulations' systems, guiding principles, and their balance of flexibility and legal certainty. He starts from the premise that such analysis should prove particularly rewarding as both legal acts have their specific DNA: The Brussels I Recast Regulation has a procedural focus when it governs the

allocation of jurisdiction and the free circulation of judgments. The multilateral rules under the Rome I Regulation, by contrast, are animated by conflict of laws methods and focus on the delimitation of legal systems. This fourth volume in the Short Studies in Private International Law Series is primarily aimed at legal academics in private international law and advanced students. But it should also prove an intriguing read for legal practitioners in international litigation. Christoph Schmon is a legal expert in the fields of Private International Law, Consumer Law, and Digital Rights. After serving in research positions at academic institutes in Vienna and London, he focused on EU policy and law making. He is appointed expert of advisory groups to the EU Commission.

This thorough and detailed Research Handbook explores the complexity of governance of sales contracts in the modern world. It examines many topical aspects of sales law and practice, with considerable emphasis being placed on the diversity of: commercial and transactional contexts; in which sales contracts are made and performed, including digital technologies, long-term contracts and global supply chains and sources governing such contracts, particularly those emanating from commercial players, such as standard form contracts, trade usages and trade terms. Written by leading experts from an international and comparative perspective, the Research Handbook is relevant to anyone with an interest in commercial sales and contract law.

Moving beyond most conventional thinking about energy security in Europe which revolves around stability of supplies and the reliability of suppliers, this book presents the history of European policy-making regarding energy resources,

including recent controversies about shale gas and fracking. Using the United States as a benchmark, the author tests the hypothesis that EU energy security is at risk primarily because of a lack of market integration and cooperation between member states. This lack of integration still prohibits natural gas to flow freely throughout the continent, which makes parts of Europe vulnerable in case of supply disruptions. The book demonstrates that the EU gas market has been developing at different speeds, leaving the Northwest of the continent reasonably well integrated, with sufficient trade and liquidity and different supplies, whereas other parts are less developed. In these parts of Europe there is a structural lack of investments in infrastructure, interconnectors, reverse flow options and storage facilities. Thus, even though substantial progress has been made in parts of the EU, single source dependency often prevails, leaving the relevant member states vulnerable to market power abuse. Detailed comparisons are made of the situations in the Netherlands and Poland, and of energy policy in the USA. The book dismantles some of the existing assumptions about the concept of energy security, and touches upon the level of rhetoric that features in most energy security and policy debates in Europe.

The Oxford Handbook of Jurisdiction in International Law provides an authoritative and comprehensive analysis of the concept of jurisdiction in international law. Jurisdiction plays a fundamental role in international law, limiting the exercise of legal authority over international legal subjects. But despite its importance, the concept has remained, until now, underdeveloped. Discussions of jurisdiction in international law regularly refer to classic heads of jurisdiction based on territoriality or nationality, or use the SS Lotus decision of the Permanent Court of International Justice as a starting point. However, traditional understandings of jurisdiction are facing

new challenges. Globalization has increased the need for jurisdiction to be applied extraterritorially, non-State forms of law provide new theoretical challenges and intersections between different forms of jurisdiction have become more intricate. This Handbook provides a necessary re-examination of the concept of jurisdiction in international law through a thematic analysis of its history, its contemporary application, and how it needs to adapt to encompass future developments in international law. It examines some of the most contentious elements of jurisdiction by considering how the concept is being applied in specific substantive and institutional settings. Time to discuss anti-BEPS measures around digitalization In the course of the BEPS Report on Action 1, it was concluded that there was no instantaneous need for specific rules to address base erosion and profit shifting (BEPS) made possible by the digitalization of enterprises and new digital businesses. At the same time, it was acknowledged that general measures may not suffice with the assessment of results to begin in 2020. While awaiting possible fundamental reforms of the tax framework, it is time to discuss anti-BEPS measures bearing in mind the peculiar features of the digital economy such as increased mobility, no need for physical presence, and dematerialization. The Book focuses on five key areas of interest: International Tax Policy Tax Treaty Law Transfer Pricing Indirect Taxation Issues EU Law “Taxation in a Global Digital Economy” analyses the issues and addresses the five key areas of interest from various viewpoints.

This book deals with convergences of legal doctrine despite jurisdictional, cultural, and political barriers, and of divergences due to such barriers, examining topics that are of vital importance to contemporary legal scholars. Written by leading scholars from more than twenty countries, its thirty-two chapters present a comparative analysis of cutting-edge

legal topics of the 21st century. While each of the countries covered stands alone as a sovereign state, in a technologically advanced world their disparate systems nonetheless show comparable strategies in dealing with complex legal issues. The book is a critical addition to the library of any scholar hoping to keep abreast of the major trends in contemporary law. It covers a vast area of topics that are dealt with from a comparative point of view and represents the current state of law in each area. ?

The importance of services in the EU economy has increased exponentially in the last decades as have the number and scope of EU rules, both those liberalising the provision of services and those protecting their recipients or consumers - the passengers, patients, viewers and bank depositors. However, these consumers, in their capacity as citizens, are increasingly disillusioned with the EU and its institutions. This book, written by practitioners, academics and advocates before the European Court, reflects on these developments, examining rules in numerous service sectors, from the capping of roaming call charges upheld in the Vodafone decision, through health care, to the requirement for air carriers to care for and compensate passengers approved in the generous Sturgeon judgment. The Court's positive approach may have been guided by a desire to consolidate the notion of EU citizenship, a status introduced, but without clear content, at Maastricht. The book therefore considers whether these uniform, EU-wide, consumer rights may not form an important component of such European citizenship. The Commission's proposal to make 2013 European Year of Citizens seems to favour such a view.

comparative environmental law. It examines in detail the methodological foundations of the discipline as well as the substance of environmental law across countries from four vantage points: country studies from all continents, responses to common problems (including air pollution, water management, nature conservation, genetically modified organisms, climate change and energy, chemicals, waste), foundational components of environmental law systems (including principles, property rights, administrative and judicial organisation, command-and-control regulation, market mechanisms, informational techniques and liability mechanisms), and common interactions of environmental protection with the broader public, private, and criminal law contexts. The volume brings together the foremost authorities in this field from around the world to provide a concise, self-contained, and technically rigorous account of environmental law as a single overall system.

The third edition of this book incorporates more than 10 years of fascinating dynamics since the entry into force of the Lisbon Treaty. Apart from analysing the general basis of the Union's external action and its relationship to international law, the book explores the law and practice of the EU in more specialized fields of external action, such as common commercial policy, neighbourhood policy, development cooperation, cooperation with third countries, humanitarian aid, external environmental policy, and common foreign and security policy, as well as EU sanctions. Five years after the second edition published, this fully updated edition contains major developments within the law itself, along with

changes and restructuring of the themes within the book. Carefully selected primary documents are accompanied with analytic commentary on the issues they raise and their significance for the overall structure of EU external relations law. The primary materials selected include many important legal documents that are hard to find elsewhere but give a vital insight into the operation of EU external relations law in practice.

This book takes an original and comparative approach to issues of causation in tort law across many European legal systems.
