

Wechsler Individual Achievement Test

The Wechsler Individual Achievement Test-Third Edition (WIAT-III) and the Woodcock-Johnson III Tests of Achievement (WJ III ACH) are two standardized commercial assessments of academic achievement utilized in clinical, educational, and research settings. Both instruments purport to measure academic achievement in a variety of curricular areas. Both produce subtest and composite or cluster scores in the form of standard scores, percentile ranks, age/grade equivalent scores, stanines, and normal curve equivalent scores. In the current study, similar subtest and composite or cluster standard scores were correlated to determine the degree of convergent validity between the two tests. The sample consisted of adults (18 years and older; $n = 50$; 25 matched pairs) and children (Ages 7-17; $n = 24$; 12 matched pairs) presenting for evaluation related to cognitive and/or psychological issues. Results indicate significant correlations for 10 of the 13 direct composite-cluster and subtest-subtest comparisons. Additionally, mean standard scores were compared to determine any significant differences between composites and clusters or subtests. The findings of this study support the use of either the WIAT-III or WJ III ACH for similar purposes.

The concept and results of achievement testing are the subject of serious conversation for many Americans - from educators to legislators. However, few teachers and parents view such testing as an integral part of teaching and learning. Testing standards of key education organizations and opinions of concerned citizens may be fleeting guides. The history of testing, the process for developing a formal test, testing abuse, misuse, and limitations are not widely known or understood even though we realize that testing is critical and here to stay. Achievement Testing explains the complicated concepts in a clear and user-friendly way to beginning teachers and students, as well as to experienced teachers who are looking for guidance in the ever-changing educational landscape.

Emotionally charged issues abound in matrimonial practice, especially in custody disputes. Expert testimony can have a dramatic impact on the outcome of a case, and when matters are highly sensitive or sensational the seeming objectivity of an expert can be dispositive. To effectively reinforce or question that testimony, certain specialized knowledge is essential. Scientifically accepted standards and theories are constantly evolving. Keeping up with the data had been a challenge, but one integrated resource has made it simple. Aspen Publishers' *Psychological Experts in Divorce Actions* pulls all the research together into the definitive guide to understanding the role of psychological evaluations in divorce and custody actions. Focused on providing the best approach to protecting your client's interests, this work explains all the

leading testing instruments, what conclusions may be drawn and how to challenge or support those conclusions. In addition to offering effective examination and cross-examination strategies, it assists you in handling the gamut of psychological factors that affect clients in divorce and custody cases. Authors Marc J. Ackerman, Ph.D., and Andrew W. Kane, Ph.D., are licensed psychologists who have been involved in hundreds of custody cases. Drawing on their extensive experience—testing parties to a divorce and treating psychological patients in the clinic—and as psychological experts in the courtroom, they identify the most important psychological evaluation research used in divorce and custody decision-making and distill the information into clear terms lawyers can readily apply. They also examine vital issues including: Ethics—confidentiality, privilege, duty to warn or protect (Tarasoff), sharing raw data, test integrity Sexual abuse—bona fide or fabricated allegations, psychological effects of sexual abuse, profiles of abuser and abused Testing—personality tests (including MMPI-2, And The new MMPI-2-RF, Rorschach, Millon, TAT); intelligence tests (Wechsler scales, Kaufman scales, Stanford Binet); custody tests (ASPECT, PCRI, PASS, BPS); and many more How divorce affects families—custody, placement, age and gender differences, grandparents, sexual preference, psychological problems

Offers a thoroughly revised, comprehensive A to Z compilation of authoritative information on the education of those with special needs.

The field of educational psychology draws from a variety of diverse disciplines including human development across the life span, measurement and statistics, learning and motivation, and teaching. And within these different disciplines, many other fields are featured including psychology, anthropology, education, sociology, public health, school psychology, counseling, history, and philosophy. In fact, when taught at the college or university level, educational psychology is an ambitious course that undertakes the presentation of many different topics all tied together by the theme of how the individual can best function in an "educational" setting, loosely defined as anything from pre-school through adult education. Educational psychology can be defined as the application of what we know about learning and motivation, development, and measurement and statistics to educational settings (both school- and community-based).
